ANNEXES

i	Introduction to German Motor Vehicles
ii	Numbered Motorized Softskin Vehicles
iv	Special Motorized Vehicles: 1939 – 1945
x	Military Trailers and Special Military Trailers
xiii	Horse-Drawn Vehicles: Wagons, Carts, Sleds
xv	Ranks and Billet Groups of the German Army
xvi	German Military Personnel Job Descriptions

THE AUTHOR

Dr. Leo Niehorster was born in The Hague, Netherlands of an American mother and Dutch father. He has lived in Holland, Peru, England, Mexico, Canada, the United States, France, and Germany. His university education has been correspondingly diverse. The University of the Americas in 1964 to 1967, University of Maryland (correspondence courses while in the US Army) from 1968 to 1972, European Business School 1972 to 1976 (BA in Business Administration), Frankfurt Fachhochschule 1978 (Dipl. Kaufmann), Columbia Pacific University 1978 to 1980 (External MA in Business Administration), Columbia Pacific University 1980 to 1982 (External PhD in History). His vocational training includes a course resulting in the degree of Telecommunications Systems Developer. He is also a licensed Apple Service Technician.

The author did his military service in the US Army from 1968 to 1972, ending up in Germany, where he stayed.

His professional career started as night shift supervisor in an airline catering service, and has spanned such activities as pizza baker at

the local Italian in Barstow, California, to product manager for long haul travel in the world's largest tour operator in Hannover, Germany. He spends most of his spare time involved in military history.

The author is a recognized authority on World War II German ground forces organization, and has put all of his expertise into the present series. Some of these books are a republishing of the original series, (which have been out of print for several years), but they have been very much enhanced and augmented, encompassing a further fourteen years of research and study in the German, American, and British archives. The revised editions as well as the new volumes in the series will be highly welcomed by all interested in German military organization in World War II.

Dr. Niehorster's previously published works include "The Royal Hungarian Army, 1920–1945", which was acclaimed as one of the Top Ten Books of 1999, and is considered by many experts to be the single most important English language history on the Hungarian Army.

THANKS

In a project as immense as this one, it is both a necessity and a pleasure to rely upon the assistance of others. I would like to mention the following for their continuing assistance: Herr Christoph Awender; Herr Martin Block; Heer Piet Duits; Mr. Thomas L. Jentz; Herr Thomas Linhardt; Herr Brün Meyer; Mr. William Russ. To all of them, my continuing thanks.

GENERAL INTRODUCTION

Much has been written about the East Front, including the 1941 Russian and African Campaigns, but little has appeared in print about the organization of those units participating in them. Hence, this is not a book about the 1941 Campaigns, but instead it is an in-depth documentation of the organization of the German Armed Forces at this period. This particular volume deals with the mechanized *Waffen-SS* formations and the GHQ service units.

The *Waffen-SS* was not part of the *Wehrmacht* (German Armed Forces), but formed a separate, broadly speaking, fourth service. The designation *Waffen-SS* has been used here for *SS* field combat units, as opposed to strictly political or paramilitary *SS* units. Contrary to service units, *Waffen-SS* units have been very well documented. It was subject only to *Wehrmacht* orders for operational use, and drew its supplies just as regular Army formations did. Replacements, disciplinary matters and “morale” education were reserved for the *Reichsführer-SS* (the leader of all the German *SS* organizations).

The line between *Waffen-SS* (the combat arm of the *SS*), *Allgemeine-SS* (the concentration camp guards), *Polizei* (the German police was subordinate to the *SS*), and *Polizei* auxiliary units is and was sometimes vague. Several *Waffen-SS* units were formed using personnel from the concentration camps, such as the *SS-Totenkopf-Division*. The *1. SS-Brigade RFSS* was another. It was used to fight partisans and stragglers in the rear of Army Group South during the initial phases of the 1941 Russian Campaign. Then the *1. SS-Brigade* came under the *Kommandostab-Reichführung-SS*, (an executive military administrative staff directly under Himmler’s personal command), in a police role, independent of all Army, *SS*, and even other Police officials in the rear areas. The brigade was used as a front line unit and placed under Army command in times of crisis at the front, but was always returned to the *Kommandostab-RFSS* after the operations were over. At times, subunits of the brigade actively assisted the notorious *Einsatzgruppen* in the mass murder of Jews and other groups of Soviet citizens.

There is no martial reason for *Waffen-SS* units to be considered as elite. But the *Waffen-SS* captured the imagination of both the German population in WWII and many historians today consider the *Waffen-SS* units as elite units, whose status frequently brought with it higher casualties and losses. While it is true that *Waffen-SS* units were often thrown into the hottest part of the fight – by the Army, probably because they were not of their own – by the Nazi party, because they were there to prove the superiority of the Nazi doctrine and spirit, the impact of the *Waffen-SS* on the actual course of the war was no different than that of the Army, and played no significant, irreplaceable operational or strategic role during the war. The *Waffen-SS* had no role at all in developing German blitzkrieg tactics and played no vital role in any of Germany’s blitzkrieg victories. It introduced no original military developments of any significance, and drained manpower and equipment from the Army.

The *Waffen-SS* depended upon the Army for arms, equipment, and supply. The performance of the so-called “elite” divisions, (basically the only ones with a respectable military record in World War II), shows no greater merit or skill than those of the Army. Nor were the *Waffen-SS* losses a great deal higher than the Army’s. The *Totenkopf Division*, which suffered the most casualties, lost no more men than the Army’s *Grossdeutschland* division – the only German Army division able to recruit across Germany, i.e. on a similar basis to the *Waffen-SS*.

A largely unsung chapter of all armies are the service units. This applies also to the German Army of World War II although it has often come under microscopic scrutiny. There were hundreds and hundreds of these units, ranging from construction brigades to field post offices.

Information regarding Army service units has been difficult to acquire. First, there are virtually no war diaries or records of Army service units from 1944 to the end of the war. They were destroyed in Allied air raids on Potsdam, where the main German military archives (Heeresarchiv) were located. Potsdam was bombed several times during 1943, in February 1945, and finally on 14.04.1945. Second, with a very few exceptions, books about service units have not been published. Hence, information regarding most units can only be found in footnotes or mentions in divisional histories, war diaries, and

weapons books. Third, although sometimes orders of battle indicated service units, this is the exception rather than the rule. Campaign histories are an even more unrewarding source for service units.

The tables of organization (*Kriegsstärkenachweisungen* – abbreviated “*KStN*”) setting down the internal unit configuration and strength were issued by the German Army Organizational Department. Georg Tessin is the foremost modern authority on German units and also has the best listing of *KStN* numbers with corresponding issue dates as published by the German Army in World War II. Started in the 1950’s, it could not be complete as more original documents have become available since the first volumes since then. For example, not all *KStN* for units existing in June 1941 are listed in Tessin. Of some, there is no trace even in the archives. Tessin does not list some units of battalion size or above as shown in the *Kriegsgliederung* (order of battle) for June 1941. The notes below the various diagrams discuss these and other details. Changes occurring to the units between this date and 22.06.1941 have been made only for those Armies for which an order of battle has been located.

Besides the official *KStN*, this book also draws on the official orders of battle (*Kriegsgliederung*) for the various armies, the official listings of all units in the Field Army (*Kriegsgliederung des Feldheeres*), and Army Publications (*Heeresdienstvorschrift*). Material in archives as well as a careful screening of orders and other archival material in Germany and other countries has been extensively researched. Contrary to the combat units, which can be verified from the master list (*Kriegsgliederung Barbarossa*), dated 18.06.1941 there are gaps for the service units. I have not located the specific orders of battle for late June 1941 of the 6th Army, 12th Army, 15th Army, 2nd Panzer Group, the logistics commands of the army groups on the east front, nor the various liaison officers, military aid groups, and military commanders in the occupied territories. There were service units assigned to the army groups and the OKH Reserves that I have not found. Furthermore, some of the original orders of battle that are still available are in poor condition, and the unit identities are not always recognizable. These various factors mean that it has not been possible to indicate the assignment of all service units identified here. The gaps in assignment are indicated with a (?).

Various service units, such as the less mobile parks and ordnance maintenance units, as well as motor transport battalions equipped with requisitioned civilian trucks and trailers, although remaining subordinate to their corresponding armies were not directly under their command. They were detached to the logistics commands of the army groups, commanded by the quartermasters general (*Versorgungsbezirk Nord*, *Versorgungsbezirk Mitte*, *Versorgungsbezirk Süd*). The Quartermaster General of the Black Sea (*O.Qu. Schwarzes Meer*), under Army Group South, also controlled service units.

Neither softskinned motor vehicles nor other equipment was ever produced by Germany in sufficient numbers to satisfy the needs of the tables of organization. Indeed, it is doubtful if any mechanized unit ever had the exact number and certainly not all the types of vehicles and equipment prescribed by the *KStN*. The war diaries of Halder, Chief-of-Staff of the *OKH* from 1939 – 1942 (*OKH* = German Army High Command), and the official war diaries of the *OKW* (*OKW* = German Armed Forces High Command), are both full of remarks about a serious lack of equipment, specialist personnel, and motor vehicles of all sorts, including armored vehicles. Units not expected to engage in combat often had less weapons than men, and even then many of those were equipped with captured equipment.

The published material contained in the sources and references section indicates publications which were consulted, (although not necessarily used), and is basically meant to assist the reader in familiarizing himself with the subject of the German Army of the period.

The author apologizes for any mistakes that have happened during the process of writing this book, (they are only my own), and welcomes critical comments and suggestions. Should any reader possess more founded information, or even the original documents thereto, I would appreciate hearing from them, so that in a future edition, the corresponding corrections can be inserted for the benefit of all.

HOW TO READ THE CHARTS

Dates are indicated in the following manner: Day.Month.Year. (Thus 22.06.41 is the 22nd Day of June 1941).

The ordinator for numbers in German is the dot (“.”). Where German units are referred to in their original German designation, this practice has been followed. E.g. *21. Panzer-Division* is the German way of designating the 21st Armored Division.

The Germans normally referred to the large formations and the smallest units with an ordinator (i.e. armies, corps, divisions, brigades, and regimental battalions, as well as companies and platoons), whereas army groups, regiments and independent battalions were referred to in the reverse order. I.e. *Heeresgruppe Mitte*, *Artillerie-Regiment 103 (mot)*, or *Panzer-Abteilung 33*. To facilitate the location of the various units and to present a uniform system of identification, all units have the identifying numbers indicated first in this work. Army groups, having names as opposed to numbers, have their designations indicated last.

Numbers in German can be confusing to Anglo-Saxons, as the decimal point becomes a decimal comma:

German: 10,5 English: 10.5 = (ten and a half)

Similarly, the comma used to separate thousands is also reversed:

German: 10.000 English: 10,000 = (ten thousand)

Where using German designations, the German practice has been followed (i.e.: *3,7cm Pak*). Otherwise, the English usage prevails: (i.e. 37mm antitank gun), using the millimeter system instead of the German WW II system based on centimeters.

Military motor vehicles and armored fighting vehicles (AFV) have a number behind them in brackets. This number refers to either the German model number (either *Kfz.* = *Kraftfahrzeug*, or to *Sd. Kfz.* = *Sonder Kraftfahrzeug*); or to the tonnage of the carrier. For civilian-type personnel and load carriers without a special number, the engine size or the weight classification is indicated instead. E.g.: truck (3-ton) refers to a cross-country (all-wheel-drive) load-carrier with a 3-ton

load factor, whereas truck (medium) refers to a civilian (rear-axle-driven) load carrier with a load factor of 3 tons. Halftrack (7) refers to the 8-ton halftrack (*Zugkraftwagen*) with the *Sd. Kfz.* number 7. Car (2) refers to the light personnel carrier with the *Kfz.* number 2. Etc. Etc. The reader is referred to the sections on vehicles in the back of this book.

Van is a load carrier with a closed, hard body, (usually of wood), used for office and communications work. Truck is a load carrier having an open bed, which could be fitted with a tarpaulin stretched over tubular metal or wooden hoops.

The diagrams are based on reproductions of German organizational symbols of the period.

The text beneath each diagram has been used to clarify it, and to give details about composition and the amounts of subunits. It breaks down the KStN, giving numbers and date of issue. KStN that are no longer available are marked thus: *)

The vehicles or items indicated behind the unit being described indicate the amounts in one of these units. E.g.:

3 Lt. Tele. Sect.: 1 car (2), means that the three light telephone sections each have one light communications vehicle (*Kfz.* 2).

In some cases, sections do not have their own vehicles, or several sections share a vehicle. In these two cases, this is indicated in the text. E.g.:

1 Mortar Section: rides with one of the infantry squad's vehicles, or,
2 Pack Radio Sect: ride together in one truck (2-ton).

The designation “Trains” includes all the administrative, supply, rations, and baggage elements of the corresponding unit.

Digits within brackets indicate personnel strength as follows: (# Officers – Beamte (=officials) – NCO – Enlisted Men)

TABLES OF ORGANIZATION – KRIEGSTÄRKENACHWEISUNGEN

German unit organizations were based on tables of organization, (*Kriegsstärkenachweisungen* – KStN). Every unit raised had one, and all orders raising units indicated the corresponding KStN number and date which applied for them. These orders also indicated any modifications that might apply at the time.

The Germans did not necessarily issue their KStN on the dates indicated on them, and it is highly unlikely that units conformed to these KStN on the issue dates. The issue date referred to a specific deadline upon which the KStN were to become effective. In several cases, the KStN were issued later, although with an earlier date. Standard KStN were always dated on the 1st of the month. Provisional KStN were dated any other day of the month. These provisional KStN, (issued to test new organizations and changes to be promulgated), were then replaced by the official, standard KStN when ready. Sometimes, these provisional KStN remained in force and in effect became the standard KStN. In such cases, a ‘standard’ KStN (with an issue date on the 1st of the month), was not issued at all.

KStN were modified and changed by General Army Memorandums (AHM – *Allgemeine Heeresmitteilungen*), by orders issued by the various arms inspectorates or even by higher headquarters. These agencies continually changed and modified the KStN, adding a vehicle here, deleting a soldier or three there, or making other modifications.

Other KStN were issued twice under the same date with minor modifications. The validity of the second one was indicated by underlining the date. Any KStN issued on that date had to have the date underlined to be valid.

KStN and changes became valid when authorized by higher headquarters and then applied immediately to unit strength reports. Internal reorganization of the units was not made until the indicated

units were able to implement them. This might mean having to wait until the units could be withdrawn from combat and having time for training and administrative matters. Units to be issued with new or complicated equipment were usually withdrawn to training grounds, transferring their old equipment to other units upon departure. A new unit was normally raised, trained, and equipped at one of these training grounds and then sent to the front, where normally (but not always immediately) it joined its parent unit or formation.

The Germans occasionally published lists with valid KStN at specific periods, approximately once a year. Some of the KStN indicated on these lists were never published, or they were issued, but with a remark to the effect that they were not to be implemented until further notification, (or specific orders), which, in some cases, was never forthcoming. Some KStN existed only a short time, and never appeared on these validity lists, (either cancelled, never authorized, or superseded).

As new KStN appeared, the old ones were supposed to be destroyed, at least at unit levels. This practice was also carried out at higher levels also. The destruction of the military archives at Potsdam in April 1945 means that only portions of the KStN remain.

The author has extrapolated and reconstructed the missing KStN from other KStN, which could be either contemporary and similar, or of the same KStN of later and/or earlier dates. The KStN number of the unit being defined in this case has an *) behind it. These educated guesses are also based on what information could be gleaned from orders of battle, unit histories (where available), unit strength reports, organizational charts, and German tactical doctrine manuals of the period.

It is important to emphasize that KStN indicated the maximum authorized organization. In many cases, they represented an ideal organization which in reality was not achieved.

GERMAN UNITS AND ORGANIZATIONAL SYMBOLS 1941

The symbols in this book are based on the official German handbook of military symbols (H.Dv. 272) of 24.03.1941, (with changes up to November 1941) and on the actual symbols used in the organizational charts (Kriegsgliederungen des Feldheeres, (15.05.1941 through May 1942). Where symbols in the latter are at variance with the former, those symbols of the organizational charts have been used.

In German organizational charts (and, as reflected in this book), the headquarters symbol represents two purposes. First, it indicated the size, function, and mobility of the unit. And, second, it also indicated the headquarters of that echelon itself. I.e., there was no separate symbol for this echelon's headquarters. For all headquarters units with (and sometimes important units without) separate KStN, the corresponding symbols were placed to the right of the echelon's symbol. The same applied to those units that were directly assigned to the echelon's headquarters.

The different functions and mobility additions were used to enhance the echelon's symbol to indicate a specific purpose. Company-sized units and subunits symbols were also modified in a similar fashion.

The Germans numbered their units on organizational charts from the right. I.e., the first company was on the far right, and the last company was on the far left. The same applied to battalions and regiments.

An interesting feature of company and subunit symbols is that their size and shape dimensions could be altered to fit the diagram being depicted with them. Several infantry companies, for example, were placed side-by-side, elongated upwards, (so that all weapons symbols could fit within), and only the left-hand company had the thickened edge used to indicate its size (more of this below). The variations in size and shape followed the original configuration, so that the basic symbol was still recognizable as such.

The symbols were intended to be mnemonic. The headquarters symbols reflected the units' pennants used on vehicles or the standards themselves. (These flags and pennants were of different colors to represent the various combat arms, and usually had a number, letter, and/or heraldic symbol superimposed upon them). Hence, any German looking at one of these symbols could immediately recognize the unit type being depicted. The colors in real life were substituted by the unit function and mobility modifiers above and below the symbols. In addition, a simplified version of the organizational symbols was, for example, painted on unit vehicles.

The mobility of the unit was also quickly recognizable. The two small circles ('wheels') underneath a symbols identified the unit as being motorized. In case these wheels were over the symbol (applied only to artillery-type units), this indicated that the unit was motorized by halftracked prime movers. Elongated ovals ('tracks') applied underneath the symbol meant that the unit was self-propelled.

All units assigned to Panzer divisions were at least motorized, so that it was thought that the addition of the motorization wheels to the upright staff symbol could be dispensed with, and that the Panzer-Truppen pennant was indication enough.

Although the official handbook indicated that armored infantry units should have the halftrack symbol underneath them instead of the motorized symbol, this practice was not yet followed in most organizational charts at that time. The diagrams in this book reflect this usage.

The lozenge symbol represented armor. All tank units used this symbol. It was shaped to reflect World War I tanks, and hence provided a good memory assist.

Aside from a very few specialized symbols, which were quickly memorized, all company-sized and smaller unit symbols tended to reflect the units' function or at least their main weapon. In most cases, a unit too difficult to depict easily was instead represented by a box with a corresponding abbreviation inside. In case it belonged to a particular arm, the arms symbol could be placed on top of or within this box. Where various modifiers applied, these were all added to the symbol.

Company-sized units had, somewhere within their symbol, a thickened part, usually a side.

Excluded from this were the firing artillery (tube, rocket-launcher, and Army antiaircraft) batteries. There, the weapon symbol itself in firing batteries (usually with the number of guns underneath) indicating a battery. (Firing artillery in units smaller than battery size were depicted on a smaller scale). None-firing batteries of the artillery arm followed the normal form of thickening a portion of the symbol to indicate their size. Infantry-type artillery (antiaircraft and infantry gun) and well as machine gun companies followed the normal practice, and the weapon symbols representing these types of companies had the upright stems thickened accordingly.

Where several columns, platoons, or detachments were gathered into a headquarters company or heavy company, (and each of these subunits had its own KStN), these symbols were enclosed in a box without a thick side.

Units smaller than companies appeared on organizational charts only if they had their own KStN. Exceptions occurred, particularly if headquarters subunits had specialized equipment. They were usually depicted on a smaller scale than company-sized units.

Staffel (Detachment) An elastic designation for several components under a headquarters section, these components being from section to platoon size. Often this was merely an administrative grouping, and the components operated independently, or were distributed to other units in combat. It could either have its own small headquarters section, or one of the components' leaders could carry out a dual function.

Kolonne (Column) An independent transportation unit, varying from company to platoon size, transporting equipment or supplies such as a bridge column (which in fact did not actually built the bridge it was transporting), or even as an 'infantry' column (which consisted of a set number of horse-drawn vehicles capable of transporting a fixed tonnage).

Zug (Platoon) An independent unit or the typical main subdivision of companies and batteries. Usually, the 1st and 2nd platoons in each company-sized unit, and also of independent platoons, were lead by a lieutenant, while the other platoons were headed by a senior NCO.

Trupp (lit. Troop; Section) A small unit, equipped with specialized equipment; it could also function as a headquarters unit.

The units indicated below were not depicted as separate symbols.

Halb-Zug (lit.: Half-Platoon) Some platoons, for example HMG Platoons, could be divided into two parts.

Gruppe (Squad, Section) This was normally the smallest subunit that existed in the German Army. In this book, the word "Squad" has only been used for infantry and reconnaissance infantry units. All other units of this size have been designated as "Sections".

Halb-Gruppe (lit. Half-Squad, i.e. Team) In the case of infantry and reconnaissance units, squads could be broken down into two parts. Infantry and reconnaissance squads were built up around the squad LMG. Where only one LMG was provided, the LMG team provided cover while the other team was the movement element. Where two LMG were available, the teams covered each other in turns. Reconnaissance teams, on the other hand, were trained to work independently, al-

**NOTES:**

The 9. SS-Infanterie-Regiment was not with the SS-Kampfgruppe-Nord, but was attached to the 2nd Mountain Division, Norway Corps, Army of Norway.

The SS-Flak-Abteilung Nord had been raised on 21.04.1941, and was still forming on 22.06.1941 at Unna, Westphalia. The 20mm anti-aircraft battery arrived in Norway on 16.07.1941, whereas the Battalion Headquarters and the remaining batteries arrived there on 22.07.1941.

**NOTES:**

The 1. SS-Brigade RFSS (Reichsführer SS) had been raised in May 1941, and was still forming at Kielce-Debica, Poland on 22.06.1941. It had not originally been intended as a combat unit, but had been raised as a security (line-of-communications) brigade, with a predominantly police mission. However, the combat situation being what it was in June 1941, the unit was thrown into combat the moment it became available.

It was equipped with French and Czech weapons (MG's, artillery, etc.) as well as French motor vehicles.

**NOTES:**

The 2. SS-Brigade RFSS (Reichsführer SS) was raised from personnel of the SS-Verfügungstruppen, the Stab Befehlshaber Nordwest, as well as the 1st, 2nd, and 3rd General SS Infantry Regiments. It had originally been foreseen for security duties with the *Rückwärtigen Heeresgebiet 102* (Army Group Center's line-of-communications command) with a predominantly police mission. However, the 2. SS-Brigade RFSS was used in front line combat unit for a short while from 25.06.1941 under the XXXXIIth Corps, 9th Army, Army Group Center around Olita. By 05.07.1941 it had been returned to the Truppenübungsplatz Arys for restructuring and conversion to a regular combat unit.

Originally, the 14th SS Infantry Regiment (same organization as the 4th SS Regiment) was also part of this brigade. However, it did not participate in the 1941 Russian Campaign and was dissolved on 30.06.1941.

2 vans for recording (17); 1 truck for personnel; 1 truck for field kitchen (medium); 1 truck as workshop (medium);

1 truck for fuel (medium); 1 truck for equipment.

NOTES:

None of the KStN for the bands indicated next to the headquarters symbols of the various regiments and battalions have been located.

The KStN for the music units were as follows:

KStN 298 01.11.1938 Band, Infantry Regiment Headquarters
 KStN 599 01.11.1938 Trumpet Corps, Artillery Regiment Headquarters
 KStN 799b 01.11.1938 Band, SS-Engineer Battalion Headquarters
 KStN 998 01.03.1938 Band, SS-Signal Battalion Headquarters
 KStN 1199a 01.11.1938 Band, SS-Standarte Headquarters
 KStN 1199b 01.11.1938 Band, SS-Motorcycle Battalion Headquarters

Presumably, the reconnaissance and antitank battalions had similar bands as the motorcycle battalion.

The only band for which the detailed composition has been found is the version for the infantry regiment, which had a band master and 37 musicians. In addition, for parades, each company of the regiment provided one musician (6 drummers and 6 pipers).

An engineer battalion had 1 band master and 27 musicians.

Bandsmen, when not playing music, were used as stretcher bearers or supernumeraries. Normally, in mechanized units, a motor bus was provided to transport the bandsmen and their instruments.

[1] The regimental companies maintained their numbering (13th, 14th, etc.) even if there were less than 12 companies in the regiment, or less than 4 regimental companies.

[2] The 15th (Motorcycle) Companies of the SS-Deutschland and SS-Der Führer Regiments were ad-hoc units. They were made up of components of various other units within the division, as follows:

15th Company unit comes from
 Headquarters Section: Headquarters Section, Headquarters Company, Infantry Regiment.
 1st Motorcycle Platoon: Motorcycle Messenger Platoon, Headquarters Company, Infantry Regiment.
 2nd Motorcycle Platoon: Motorcycle Infantry Platoon, 15th Motorcycle Company/11th SS Regiment.
 Armored Car Section: Light Armored Car Platoon, Armored Car Company, Armored Reconnaissance Battalion.

[3] The HMG platoon was not present, instead there was an HMG Detachment with 2 HMG, similar to KStN 1111 dated 01.02.1941. (See note [4] below)

[4] Organized under KStN 1111, dated 01.02.1941.

[5] The 13th Company 9. SS-Infanterie-Regiment was equipped with only 4 light and no heavy infantry guns.

[6] The 14th Company 9. SS-Infanterie-Regiment was equipped with Czech 47mm antitank guns.

NOTES:

This organization applied only to the motorized infantry battalions of the Leibstandarte SS Adolf Hitler (LSSAH). The LSSAH was the elite Waffen-SS unit. As the name reflects, it was Adolf Hitler's personal guard, and was the counterpart of the Army's Infanterie-Regiment *Großdeutschland*. Both units were continually being reequipped with the latest equipment and weapons, and received the best personnel of their respective arms.

 Co Trains: 1 mcl; 1 mcl w/sc; 1 car (light); 2 trucks (2-ton); 4 truck (3-ton); 2 trailers (ammo).

NOTES:

The ad-hoc Abteilung Schöneberg, its small headquarters was made up of elements of the former V. (Heavy) Battalion, was named after its commander and contained all the self-propelled armored vehicles of the LSSAH, and was obviously the beginnings of an armored battalion. It was later to be expanded to a full-fledged, T/O&E Sturmgeschütz battalion in 1942.

The SS-Reich-Division had an independent assault gun battery, organized in the same way as the LSSAH battery.

The SS-Totenkopf Division also had an independent Sturmgeschütz battery, which was raised early June 1941. It was still in the process of forming on 22 June 1941, and did not join the division until 23.08.1941.

Bty Maint Sect: 1 mcl w/sc; 1 car (2/40). Bty Trains: 1 car (light); 2 trucks (light); 1 truck (medium); 1 truck (3-ton).

NOTES:

The SS-Reich, the SS-Totenkopf, and the SS-Wiking Infantry Divisions (motorized) each had three Motorized Light Artillery Battalions of 3 batteries equipped with light 105mm field howitzers, and one battalion with three heavy 150mm field howitzer batteries.

The Leibstandarte-SS Adolf Hitler only had one motorized light artillery battalion, equipped with three batteries of light 105mm field howitzers. The motorized heavy artillery battalion had four batteries, two with heavy 150mm field howitzers, and two with heavy 88mm antiaircraft guns.

The SS-Kampfgruppe Nord artillery regiment had a signal platoon and a calibration Detachment. It had two motorized light artillery battalions with two

batteries each. The heavy artillery battalion had one 105mm light field howitzer batteries, one heavy 105mm gun battery, and one battery with 75mm Norwegian field guns, presumably also organized under KStN 434 – as presented above.

The 1. SS-Brigade RFSS had one motorized artillery battalion (the 51st), with two batteries of light 105mm field howitzers and one battery of heavy 150mm field howitzers. All field howitzers were Czech weapons.

The 2. SS-Brigade RFSS only had the 52nd Battery (without a battalion headquarters) of heavy 150mm field howitzers. However, this one battery had six howitzers instead of four.

NOTES:

The SS-Reich, SS-Totenkopf, and SS-Wiking Infantry Divisions (motorized) as well as the LSSAH and SS-Kampfgruppe Nord each had one Motorized Signal Battalion. The SS-Kampfgruppe Nord did not have a Light Signal Column.

The 1. and 2. SS-Brigade RFSS did not have signal battalions, but instead had a Motorized Infantry Signal Company each (the 51st and 52nd).

Det: 12 mcl; 4 mcl w/sc; 14 cars (light); 1 truck (light); 2 LMG.

KStN 2251 *) Motorized Field Post Detachment^[3]

01.02.1941

Det: 3 cars (light); 1 truck (medium).

NOTES:

- [1] In practice, the staff of the Divisional Supply Commander operated within the division headquarters as the personal staff for the **DiNaFü** as well as the command echelon for the battalion itself.
- [2] When the formation had two medical companies, one of the two companies would not have a dentist in the 2nd (Clearing Station) Platoon. One of the two divisional medical companies therefore had 1 light truck and its enlisted driver, as well as the officer dentist, less.
- [3] The “independent” Military Police and Field Post Detachments, (although each having its own KStN), were fully integrated into the division headquarters at all times, and attached to the **St.Qu.** for administration, mess, and supply.

WETTERPEILZUG (motorisiert)
Meteorological Platoon (motorized)

KStN 532 *)
 01.02.1941

Meteorological Platoon (motorized)

Hqs Sect: 1 car (3); 2 trucks (medium).
 1 Wind Gauge Sect: 1 car (3).
 1 Temperature Measurement Sect: 1 van (62).
 3 Azimuth Sect: 1 van (62).
 1 Med Radio Sect *b*: 1 car (15); 1 van (76).

NOTES:

Air temperature and atmospheric pressure affected the flight of artillery shells. And the guns firing them wore out. Wear and tear changed the characteristics of the guns and caused the muzzle velocity to change, necessitating range corrections. Up-to-date information about the status of the guns and their characteristics not only made their fire more accurate, but often made it possible to dispense with registration. Registration was firing a round to see where the shell would land, thereby greatly reducing the possibility of surprise.

The combination of the data provided by the Calibration Sections, (which accurately calibrated the guns), and the careful calculation using data supplied by the Meteorological Platoons, (which allowed compensation for weather conditions), maintained the initial accuracy of the guns even as they wore out.

The Meteorological Platoon was an Artillery Inspectorate unit charged with noting weather conditions so that the artillery could include these data in their firing charts, making the corresponding corrections to improve their accuracy.

The platoon monitored weather conditions and patterns so artillery units could fire accurately. It's sub units measured pressure, temperature, humidity, wind direction, and velocity. This ballistic meteorological data was for GHQ artillery, and incorporated meteorological data obtained from division artillery.

The wind and temperature data was also provided to the sound ranging units of artillery observation battalions. The Meteorological Platoon was not responsible for weather forecasting, which was Luftwaffe mission.

These units were generally found at Army level.

LEICHTE Vo-MESSTRUPP (motorisiert)
Light Calibration Section (motorized)

KStN 523 *) Light Calibration Section (motorized)

01.02.1941 1 car (1); 2 vans (3-ton).

NOTES:

The Light Calibration Section was an Artillery Inspectorate unit which measured the changes in muzzle velocity of guns over a time period to indicate changes in the mechanics of the guns as they wore. This improved accuracy. They were normally found at Army level, moving around from GHQ artillery unit to GHQ artillery unit, providing their calibration service. In combination with the Meteorological Platoons, they provided valuable data for accurate fire.

SCHWERE Vo-MESSZUG (motorisiert)
Heavy Muzzle Velocity Calibration Platoon (motorized)

KStN 524 Heavy Calibration Platoon (motorized)

01.02.1941 Hqs Sect: 1 mcl; 1 car (1).
 2 Calibration Sect: 2 trucks (medium).
 Plt Trains: 3 trucks (medium).

NOTES:

These Calibration Platoons were Artillery Inspectorate units which periodically established the muzzle velocity of the heavy guns as their components, particularly the barrel sleeves, wore. Wear changed the performance, and hence range and accuracy, of the guns. The new data was compared to the muzzle velocity of the gun when it was first fired, allowing important corrections to firing accuracy, especially when the gun was fired frequently.

Heavy Calibration Platoons were normally found more or less permanently attached to one GHQ heavy artillery unit acting in a mobile role.

Power and Light Sect: 1 truck (medium).

Bty Main Sect: 1 mcl w/sc; 1 car (2/40).

Bty Trains: 1 car (light); 4 trucks (medium).

NOTES:

The KStN notes stated that if the *Sd.Ah. 109* and *Sd.Ah. 111* series of trailers were not available, 30-seat motor buses were to be issued instead, and converted to an office/workshop configuration. The wheeled tractors are not further identified, but merely indicated as belonging to the 50 - 100 horsepower class. If the trailers were not available, the tractors were not to be issued. The above proposed organizations for 1941 are based on later KStN, so it could well be that in 1941 none of these numbered trailers was available, and that motor buses and heavy office/workshop vans (*Kfz. 51, Kfz. 72*, etc.) with specialized trailers would have been used instead.

All these battalion were ready by 20.06.1941. They consisted of the former survey companies augmented by map printing companies. The KStN of 1941 for these units have not been located; however, the Kriegsgliederung (order of battle) for this date shows these units, so they undoubtedly existed.

These units were normally found at Army Group and Army level.

Plt Hqs: 3 mcl; 1 car (light).
 Park and Operations Det: 2 mcl; 10 trucks (medium).
 Col Trains: 1 truck (medium).

NOTES:

The support units varied considerably, as the table to the right shows.

As per the motorized battalion, a KStN for the Motorized Engineer Column has not been located, nor its the organization. As these units had been recently been reorganized from RAD units, so the semi-motorized organization from the Bau Service has been used, but motorized in all aspects as per normal Army organizations.

Each battalion had some 1300 men.

Lt Tele Sect c: (# 0-0-1-3); 1 telephone car (15).

Trains: (# 0-0-2-6); 1 truck for personnel (light); 1 truck for baggage and equipment (light); 1 truck for fuel (light).

Technical Troops (*Technische Truppen*)

The technical troops were formed from two different sources. The War Economy and Armament Office (*WiRüA* = *Wehrwirtschafts- und Rüstungsamt*) of the German Armed Forces (*OKW*) and the Technical Emergency Corps (*TN* = *Technische Nothilfe*), a civilian agency. These troops performed highly technical services requiring specialized equipment for the armies in the field.

In German the *WiRü* unit was a *Technisches Bataillon* (with an Arabic number), and a unit raised by the *TN* was a *Technische Abteilung* (with a Roman numeral), which also had "TN" over the symbol in addition to the "T". to the left of the echelon staff. In English, the units would both be designated as technical battalions, so the initials "TN" have been added to the English designation to differentiate the two types of battalions, which had different missions.

Technical Battalion – Arabic numbers (*Technisches Bataillon*)

The Technical Battalions had been raised by the *WiRüA* and taken over by the Army on 05.04.1940, and designated as *Technische Bataillone* (Technical Battalions). They were intended for emergency use during the active phases of combat and the first phases of occupation.

They advanced directly behind the fighting troops, taking possession, securing, and making operable again important resources, plants, and utility centers, so as to provide hospitals, headquarters buildings, personnel accommodations, etc., with water, electricity, and gas.

The battalions also scouted out and seized economically and militarily important plants, factories, installations, etc., and facilities for processing raw materials and manufacturing weapons.

The more permanent work in the occupied areas was left largely to other units, especially the *Bautruppen* (construction troops) of the Army, the *Technische Nothilfe* (technical emergency corps), and detachments of the *Organisation Todt* (Todt Organization), which worked at times independently and at times under the supervision of the *WiRü*.

Technical (TN) Battalion – Roman numerals (*Technische Abteilung*)

The Technical (TN) Battalions were raised from the Technical Emergency Corps organization (*TN* = *Technische Nothilfe*), which was a civilian voluntary service created in 1919 and subordinate of the Ministry of the Interior. Its original mission was at that time the operation of critical supply, transport, and food industries during the unrest following World War I. Starting in 1924, as the political situation improved, emergency disaster control became its main mission. In the 1930's, civil defense missions were also incorporated, meaning that the *TN*'s main task was to cope with all emergencies and dangers to the public with emphasis on chemical warfare and air defence.

Between 1931 and 1934, the *TN* cooperated with other organizations in the Third Reich to employ and train young unemployed people for some weeks or months in labor camps of the so-called *Freiwilliger Arbeitsdienst* (Voluntary Labor Service), similar, but not identical to the *Reichsarbeitsdienst* (*RAD*), which was established later. In June 1935 this joint venture under supervision of the Reich ministry of labor was commuted to the by then obligatory *RAD* service. The *TN* had began becoming associated with the *Ordnungspolizei* in 1936, and by a law passed on 25.03.1939 officially became a semiautonomous organ as "technical auxiliary police" (*technische Hilfspolizeitruppe*), similar to that of the volunteer fire departments. The men were engineers, technicians, and skilled and semiskilled specialists in construction work, public utilities operation, communications, metal salvage, and other related fields.

During the war its role was extended to provide technically trained personnel for emergency work and to deal with breakdowns in public services. The bulk of their work was of an air raid defence nature with the emphasis on keeping vital public utility services running. In addition to this home front work units of the *TN* known as *TN Kommandos* operated with the Wehrmacht.

On 01.06.1941 many men of the *TN Kommandos* liable for military service were inducted and formed into technical battalions (*Technische Abteilungen*) of the German Army and Air Force. These battalions had the task of providing the troops with specialized technical assistance, construction, and repair work. They were often used on a large scale in military operations for repairing damage, clearing waterways, repairing lock-gates, operating pumping stations and generating plants amongst other skilled and important tasks. They cleared blocked waterways, canals, as well as sea and inland ports for supply purposes, repaired and operated port facilities, including the mechanical loading and unloading facilities in harbors, operated the mechanical handling utilities, They dug water wells, and quickly repaired electricity, water, and power utilities. They also inspected major supply facilities in occupied territories and supervised their development for the purposes of the Wehrmacht.

NOTES:

One of the primary tasks the German Army had was capture enemy oil fields. The Soviet Union's forces were expected to defend them vigorously and to attempt to destroy them if forced to retreat.

These two battalions, as the name indicates, had the mission of technical occupation and repair of captured enemy oil facilities in the Soviet Union. The battalions were composed of skilled engineers and technicians trained to restore and operate war-ravaged oil fields or refineries.

 Maint Sect: 1 mcl w/sc; 1 car (2/40).

NOTES:

Germany invaded the Soviet Union in 1941 with an Army which included more than 150 construction and labor battalions of varying types, totalling over 250,000 labor/construction troops. In addition to these quarter of a million Army troops, there were the *Reichsarbeitsdienst (RAD)* and *Organisation Todt (OT)* organizations. Both the *RAD* and the *OT* provided thousands of additional laborers for the armed forces when the Germans invaded the Soviet Union on 22 June 1941. The *RAD* was the government run paramilitary labor organization providing the obligatory pre-military training of young men. During the Second World War it functioned as an auxiliary formation providing labor support for the German Armed Forces. The *OT*, on the other hand, was a civilian construction organization, being responsible for a huge range of civilian engineering projects both before the war, (such as building the Autobahns), as well as during the war for the German Armed Forces in Germany and in the occupied territories. The Westwall, the Atlantic Wall fortifications, the U-Boot bunkers, etc., were examples of military construction projects by the *OT*.

The German Army was not generally a mechanized force. The Army, the *RAD*, and the *OT* construction units consisted of large masses of men on foot equipped mainly with spades and pickaxes, and a few pneumatic tools such as power saws. Cement mixers and paving rollers were available in limited numbers, but almost all of the work was done with hand tools. Heavy equipment such as bulldozers, road graders, rock crushers, etc. was not available. All construction projects were carried out by human labor: many men using hand tools. The larger the project, the more men were used, often including locally drafted foreign civilians, both men and women, in the occupied territories.

10.11.1939

Det: 1 car (11); 3 trucks (2-ton); 1 truck (heavy);
 1 wedge-shaped 400 – 450 kilo snow plow blade;
 1 wedge-shaped 600 – 650 kilo snow plow blade;
 2 single-sided 750 – 800 kilo snow plow blades.

NOTES:

The all-wheel drive light 2-ton trucks were equipped with hydraulics for operating the snow plows. Depending on the mission of the detachment, different types of snow plows were fitted to the trucks. The heavy truck was used to spread sand. At this time, all eight Motorized Snow Clearing Detachments were attached to the provisional Snow Clearing Battalion Hesse in Norway, which provided logistical support.

By October 1941, another 78 Motorized Snow Clearing Detachments would be raised. Normally, they were attached to Road Construction Companies, which provided logistical support.

Road Construction Equipment Column (motorized) (# 0-0-4-29)
Col Hqs: 1 mcl; 1 mcl w/sc; 1 truck (light).
4 Concrete Surfacing Equipment Sections: 1 truck (heavy); 1 trailer (open, 5-ton); 1 cement mixer. [1]
1 Asphalt Surfacing Equipment Section: 1 wheeled tractor (medium); 2 trailers (5-ton); 4 oil or steam powered rollers. [2]

NOTES:
Neither a KStN number nor date for the Motorized Construction Battalion and the Motorized Construction Company have been located. However, the Kriegsgliederung (order of battle) for this date shows these two units. Probably an improvised organization, as no KStN has been discovered for a motorized road construction battalion. Possibly the normal foot organization was used, and motor vehicles added until enough were there to transport the entire battalion.

KStN 2045

01.12.1935

Road Construction Company

Co Hqs: (# 2-1-4-5); 1 mcl; 1 mcl w/sc; 2 cars (medium).

Tele Sect: (#0-0-0-3).

3 Construction Plt: (#1-0-8-95).

Column: (# 0-0-1-13); 6 trucks (medium).

Co Trains: (# 0-0-1-15); 2 wagons (*Hf. 1*) with 4 light draught horses; 2 field kitchens (*Hf. 11 or 13*) with 4 draught horses.**KStN 2061**

01.10.1938

Road Construction Equipment Column (partially motorized) (# 0-0-4-29)

Col Hqs: 1 mcl; 1 mcl w/sc; 1 truck (light).

4 Concrete Surfacing Equipment Sections: 1 truck (heavy); 1 trailer (open, 5-ton); 1 cement mixer. [1]

1 Asphalt Surfacing Equipment Section: 1 wheeled tractor (medium); 2 trailers (5-ton); 4 oil or steam powered paving rollers. [2]

NOTES:

[1] The cement mixers were transported on the 5-ton trailers.

[2] The two trailers in the Asphalt Surfacing Equipment Section were towed by the wheeled tractor (road train). Tactically, the power rollers moved on their own account, at approx. 3-4 km/h.

Again, basically a large laborer unit, (a battalion having 1469 men), with some specialists and some basic road paving equipment.

NOTES:

In 1941, propaganda units still belonging to the Signal Troops, although they later became a separate service. The personnel consisted largely of war correspondents, photographers, film camera men, and radio commentators, with administrative personnel included for support. The main function of propaganda units was front line reporting for consumption at the home front as well as providing talks and showing films to the German troops. They also conducted propaganda against to the enemy in the form of leaflet distribution and loudspeaker talks.

About half (57) of the men were not Army personnel at all, but were appointed by the *Reichs* Ministry of Public Enlightenment and Propaganda (*Reichsministerium für Volksaufklärung und Propaganda (RMVP)*) under the infamous Joseph Goebbels. The specialized vehicles were also to be provided by the *RMVP*.

NOTES:

Normally, the German Armed Forces was set up to move everything strategically by rail. Unfortunately, the Soviet railways had a different gauge than that of its western neighbors, and required relaying of the tracks and reconfiguration of all railway facilities to enable the Germans to use them. The motor transport units were supposed to provide initial strategic transportation capability by road while the railway engineers followed the railway lines and converted them for the German trains, or until enough Soviet rolling stock became available.

These motor transport units were very much road bound, consisting of civilian cargo vehicles of all sorts requisitioned in Germany upon mobilization and later from the occupied countries. Not all the trucks were the same by any means, although it was preferred that the columns and companies had trucks of the same load factor, make, and model. The total tonnage of the companies was to be maintained, but could be surpassed if the makes and models of both the trucks and trailers made it unavoidable. They were normally employed on good roads, covering up to 200 kilometers per day on them. Poor roads reduced the distance considerably, and caused maintenance problems.

Initially, the regiments had been integral units. By mid-1941, they had become independent headquarters, meant to control several motor transport battalions, companies, and columns of the Motor Transport Troops.

Note that there were also Motorized Column Transport units, which belonged to the Supply Troops. Columns and companies of both services were often cross attached between Motor Transport and Supply headquarters.

KRAFTWAGENTRANSABTEILUNG

Motor Transport Battalion

KStN 1012 *)
01.02.1941

Headquarters / Motor Transport Battalion

Bn Hqs: (# 7–0–2–4); ride in vehicles provided by the Motor Pool.

Administration Sect: (# 0–2–4–2); ride in vehicles provided by the Motor Pool.

Motor Pool: (# 0–0–1–20); 6 mcl; 2 mcl w/sc; 1 car (light); 2 cars (medium); 1 car (heavy); 1 motor bus (light); 3 trucks (light); 2 fuel trucks (light).

KStN 1035
01.10.1936

Motorized Reconnaissance Platoon / Motor Transport Battalion

Plt Hqs: 2 mcl; 1 car (medium).

5 Sect: 3 mcl; 3 cars (light).

Plt Trains: 1 mcl w/sc; 2 trucks (light).

KStN 1051
01.02.1941

Motor Maintenance Platoon

Plt: 1 mcl; 1 car (medium); 1 truck for supplies (light); 1 truck for workshop (heavy); 1 workshop van (79); 1 motor bus (22 seats); 1 halftrack (7); 1 trailer (2 axle – equipment); 1 trailer (for Generator Type A for 15k AC – *Sd.Anh. 24*).

KStN 1019
01.10.1938

Headquarters / Motor Transport Company “a”

Co Hqs: 5 mcl; 1 car (light); 1 car (medium); 1 car (11).

Co Trains: 2 mcl w/sc; 1 car (light); 3 trucks (light); 1 fuel truck (heavy).

KStN 1021
01.10.1938

Motor Transport Platoon / Motor Transport Company “a”

Plt Hqs: 2 mcl; 1 mcl w/sc; 1 car (1); 1 AA car (4 w/twin MG); 2 fuel trucks (heavy).

3 Sect: 5 trucks (heavy); 4 trailers (4-ton, 2 axle – cargo).

NOTES:

Each medium truck and each trailer was supposed to have a load factor 4 tons, giving each platoon a capacity of 108 tons. With 5 platoons that equals 540 tons per company, whereof 500 tons were the actual cargo payload.

The NSKK (*Nationalsozialistisches Kraftfahrkorps* = National Socialist Drivers Corps) was a paramilitary organization of the Nazi Party with the primary aim of educating its members in motoring skills. Only the four NSKK battalions indicated here, specifically raised in 1941, were subordinated to the Army. The tonnage payload of the NSKK companies was about half of that of the regular Army units.

Battalion	Organization	Tonnage	Assignment
NSSK Kw.Trsp.Abt. 496	1. – 3. Companies	750 tons	?
NSSK Kw.Trsp.Abt. 497	1.– 10. Companies	2500 tons	?

III/Kw.Trsp.Rgt. 616	11. – 16. Companies	3000 tons	?

PANZER-INSTANDSETZUNGS-ABTEILUNG **Armored Vehicle Repair Battalion**

KStN 1182 *) Headquarters, Armored Vehicle Repair Battalion

21.05.1941

Hqs: 5 mcl; 4 cars (light); 1 car (medium); 1 car (15).

Admin Group: 1 car (light); 1 truck for equipment and baggage (light); 1 truck for rations (light); 1 kitchen truck (medium);
1 truck for fuel (medium).

KStN 1184 *) Tank Repair Company

21.05.1941

Hqs: 1 mcl w/sc; 1 car (light); 1 car (1); 1 truck (medium).

2 Plt: 1 mcl w/sc; 1 car (1); 1 truck for baggage and equipment (3-ton); 6 trucks for spare parts, replacements, and tools (3-ton);
1 truck for workshop equipment (3-ton); 1 workshop van (79); 1 electrics workshop van (3-ton);
1 van for electrical repair equipment and electrics spare parts (3-ton); 1 motor crane (revolving 3-ton);
1 halftrack crane (6 tons – 9/1); 1 trailer (for generator Type A for 15k AC – *Sd.Anh. 24*).

Armorer Workshop: 1 car (15); 1 truck for equipment (medium).

Signal Repair Workshop: 1 truck with spare radios (1.5-ton).

Co Trains: 1 car (light); 1 truck for equipment and baggage (medium); 2 kitchen trucks (medium); 1 truck for fuel (medium).

KStN 1186 *) Armored Car Repair Platoon

21.05.1941

Hqs: 3 mcl; 2 cars (light); 1 car (15); 1 truck for spare parts (light).

Repair Plt: 1 mcl; 1 car (light); 1 truck for baggage and equipment (medium); 3 trucks for spare parts (medium);
2 trucks for personnel (medium); 1 truck for workshop equipment (medium); 1 workshop van (79);
1 trailer (for generator Type A for 15k AC – *Sd.Anh. 24*).Plt Trains: 1 car (light); 1 truck for personnel, equipment, and baggage (medium); 1 kitchen truck (medium);
1 truck for fuel (medium).

KStN 1189 *) Tank Recovery Platoon

21.05.1941

Hqs: 1 mcl; 1 mcl w/sc; 1 car (1); 1 car (1).

Plt: 8 mcl; 2 mcl w/sc; 2 car (1); 8 halftracks (7); 8 halftracks (9); 8 tank trailers (Sd.Ah. 115); 8 tank trailers (Sd.Ah. 116).

Plt Trains: 1 mcl w/sc; 1 car (light); 1 truck equipment and baggage (medium); 1 kitchen truck (medium); 1 truck for fuel (medium).

NOTES:

These four battalions are not indexed in Tessin, although he does list the provisional KStN for them of 21.05.1941, which no longer exists. (The 01.04.1943 versions have been used as a basis for the above lists.) The battalions are shown in the *Kriegsgliederung* (order of battle) for 1941 as being administered by the Service Troops. However, these battalions were not part of the Service Troops. They had been raised by order of the *In 6* in the *OKH*, which was responsible for the Fast Troops (*Schnelle Truppen*) units, as the KStN numbering in the 1100's also indicates.

They were raised in a hurry on 24.05.1941, and there seems to have been problems during this process, as the ordered ready date was extended several times.

Battalion	Assigned	Status
Panzer-Instandsetzungs-Abt. 543	2 PzGr, Army Group Center	Being raised in WK III, ordered to be ready by 07.07.1941
Panzer-Instandsetzungs-Abt. 545	1 PzGr, Army Group South	Arriving from WK VIII
Panzer-Instandsetzungs-Abt. 522	3 PzGr, Army Group Center	Being raised in WK II, ordered to be ready by 07.07.1941
Panzer-Instandsetzungs-Abt. 559	4 PzGr, Army Group North	En-route to East Front from WK IX

 Lager

KStN 7731 *) Motor Vehicle Parts Supply Depot [Company echelon unit]

01.04.1941 Depot:

Unit	Assigned
Kraftfahr-Ersatzteil-Lager 6	?
Kraftfahr-Ersatzteil-Lager 7	?
Kraftfahr-Ersatzteil-Lager 12	?
Kraftfahr-Ersatzteil-Lager 106	18 Army, Army Group North
Kraftfahr-Ersatzteil-Lager 112	?
Kraftfahr-Ersatzteil-Lager 206	?
Kraftfahr-Ersatzteil-Lager Königsberg	WK I
Kraftfahr-Ersatzteil-Lager Warschau	Generalgouvernement
Kraftfahr-Ersatzteil-Lager Rumänien	Deutsche Heeres Mission

NOTES:

No KStN have been found for these units, although Tessin lists the KStN and they are shown in the Kriegsgliederung (order of battle) for June 1941.

KRAFTWAGENABSCHLEPPKOMMANDO

Motor Vehicle Recovery Detachment

KStN 1057

Motor Vehicle Recovery Detachment

20.02.1940

Det Hqs: 1 mcl; 2 cars (light); 1 van for equipment (medium); 1 two-axle trailer (kitchen – 2.5-ton); 1 bicycle.

2 Platoons: 1 car (light); 1 motor bus (medium / 32 seater); 2 wheeled tractors (heavy); 1 truck for fuel and equipment;
2 towing vehicles with cranes (heavy); 6 recovery bogies; 2 two-axle trailers (for motor vehicle transport);
2 low bed trailers.

Unit	Assigned
Kraftfahr-Abschlepp-Kdo. 66	?
Kraftfahr-Abschlepp-Kdo. 67	?
Kraftfahr-Abschlepp-Kdo. 756	9 Army, Army Group Center

SCHIENENSCHLEPPER-ZUG

Motor Towing Platoon for Railway Vehicles

KStN ??? *)
(??)**Motor Towing Platoon for Railway Vehicles**

Det Hqs: 1 mcl; 1 car (light).

4 Sect: 1 tractor (heavy) for towing railway vehicles.

NOTES:

No KStN have been found for these units. Tessin does not list the KStN at all, although they are shown in the Kriegsgliederung (order of battle) for June 1941.

The Soviet railway track gauge was 1.524 meters, whereas European Standard gauge was 1.435 meters. This different of 0.089 meters meant that none of the European Standard rolling stock could be used in the Soviet Union.

Motor Towing Platoons for Railway Vehicles were raised to provide towing capabilities for captured Soviet railway wagons for which no locomotives were available.

Unit	Assigned

NOTES:

These special battalion echelon headquarters were versatile units, and were used for a variety of purposes. For example, the 683rd was used for controlling the loading of units, supplies, and equipment for the Afrika Corps in Naples (as the “Verladestab Neapel”). Others were used to control various supply functions or operations of their superior Armies.

Food Registration Headquarters

KStN 2087 *) Food Registration Headquarters
01.02.1941 (?) (#0-7-5-5); 3 cars (medium); 1 truck (light).

NOTES:
As the designation indicates, this was a headquarters concerned with registering all types of food in the area assigned to the army, and was a roving unit. As such, it had almost no equipment except one typewriter. It included 3 interpreters, although more could be requested if necessary.

These battalion echelon headquarters are not indexed at all in Tessin, although fourteen units are shown in the *Kriegsgliederung* (order of battle) for June 1941, some shown as company sized units. The earliest listed KStN are dated 01.08.1941.

NOTES:

The Army and Special Commissary Offices supervised the requisitioning and supply of rations for non-divisional units. In addition, the Army commissary offices also issued clothing. They erected rations and food supply distributing points which were refilled regularly by the bakery and butchery units, as well as food locally collected.

Administration, mess, and supply was to be provided by the superior headquarters. That headquarters was also to provide the additional vehicles necessary to move the complete commissary office. Labor for the commissary office was to be provided by personnel detached from supply battalions attached to the same superior unit.

BODENSTÄNDIGE VERPFELGUNGSDIENSTSTELLE

Static Commissary Station

VD

HVD

KStN 2087

Static Commissary Station [Company echelon unit]

01.02.1941

(#0–7–10–20); 2 mcl; 2 cars (light); 8 trucks (medium).

NOTES:

Initially designated as Static Commissary Office (*bodenständige Verpflegungsamt*), the Static Commissary Station had the same functions as the Commissary Office, with the difference that static units were stationed in the occupied countries. The prefix *Heeres-* (for GHQ) was used to indicate that the station was directly assigned to the OKH.

 Technical Plt: (#1-0-4-40); 2 cars (light); 2 vans (light); 10 trucks (medium); 1 wheeled tractor (heavy – 100 HP);
 5 trailers (two-axle – 3.5-ton); 3 trailers (diesel powered ice makers); 8 trailers (refrigerator – *Sd.Ah. 107*);
 4 trailers (generator – 220/380 Volts, DC, 36 kVA).
 Maint Sect: (#0-0-1-3); 1 mcl w/sc; 1 car (2/40).
 Worker Plt: (#0-0-6-50).

NOTES:

The 1st and 2nd Meat Processing Companies slaughtered, and produced sausages, smoked ham, and meat or sausage in cans.

The 3rd Butcher Operations Company provided backup. The 1st Technical Platoon provided equipment as well as motor vehicles and drivers to distribute the meat products. The 2nd Work Platoon included

- 1 construction NCO,
- 2 agricultural NCO,
- 5 craftsmen,
- 5 agricultural workers,
- 2 milkers,
- 3 masons,
- 3 carpenters,
- 3 smiths,
- 2 shoemakers,
- 2 tailors,
- 3 canine handlers with one dog each.

The Battalion Headquarters messed with one of the subordinate companies.

The personnel of the Meat Processing Companies were transported in the Butcher Operations Company's vehicles.

1 Sausage Sect: (#0-0-1-12).

KStN 1282 *)**Butchery Personnel Company**

01.02.1941

Co Hqs: (#1-1-4-4); 1 mcl; 1 car (light).

Platoon: Hqs Sect: (#1-0-1-5).

2 Butcher Sect: (#0-0-1-15).

1 Sausage Sect: (#0-0-1-12).

NOTES:

The Butcher Company consisted of only the one platoon. Prior to 1941, it had been designated as such. The 1941 redesignation reflected the unit commander's "K" (company echelon) billet.

Personnel units (P.E.) were used to man existing butchery plants, slaughter houses, and other meat processing facilities housed in buildings. They were authorized the specialized clothing and small utensils, but the main butchery

equipment was only issued if not available in the occupied buildings. Livestock was sent directly to the butchery companies for slaughtering and dressing.

A butchery company was able process a set number of animals per day:

40 beef cattle equal to 40,000 meat rations.

80 pigs equal to 24,000 meat rations.

240 sheep equal to 19,000 meat rations.

Heeres-Bekleidungsamt Neapel	Commander-in-Chief South
Heeres-Bekleidungsamt Paris	Army Group West

NOTES:
The designation *Lager* (Depot) is crossed through in the *Kriegsgliederung* (order of battle) for June 1941, and replaced by *Amt* (Office), as shown in the diagram. The date is not indicated for this change in designation. The designation *Heer* (for GHQ) was used to indicate that the station was directly assigned to the *OKH*, whereas *Armee* (for Army) were used depending on the headquarters to which the depots were assigned. Administration, mess, and supply were to be provided by the superior headquarters. Laborers to work at the depot were allocated by that same headquarters.

WIRTSCHAFTSKOMPANIE (tmot)
Supply and Clothing Company (semi-motorized)

KStN 1291 *) Supply and Clothing Company (semi-motorized)
01.02.1941 Co Hqs: (#2-1-3-6); 1 mcl; 2 cars (light).
2 Distribution Plt: (#1-0-4-52); 1 mcl w/sc; 1 motor bus (light).
1 Motor Vehicle Escort Plt: (#1-0-6-47); 1 mcl; 1 mcl w/sc; 1 car (light); 1 truck (medium); 1 kitchen truck (medium).
Technical Group: (#0-0-4-16); 1 mcl w/sc; 1 car (2/40).
Co Trains: (#0-0-3-6); 1 truck for rations (medium); 1 truck for fuel (medium).

NOTES:
A KStN for 1941 for the semi-motorized Supply and Clothing Company has not been located, let alone the organization. However, the *Kriegsgliederung* (order of battle) for June 1941 shows these units, so they undoubtedly existed. The KStN of 01.03.1942 is used to depict the above organization.

STAB, ARMEESANITÄTSABTEILUNG
Headquarters, Army Medical Battalion

KStN 1302 *)
 01.10.1937

Headquarters, Motorized Army Medical Battalion [Regiment echelon unit]

Bn Hqs: (#2–3–6–6); 1 truck for chemical field lab (light); 1 bicycle.

Group of Consulting Physicians: (#18–0–11–14)

Motor Pool: (#0–0–1–16); 1 mcl; 1 mcl w/sc; 10 cars (light); 2 trucks for equipment & baggage; (light);
 2 vans for medical supplies (medium); 1 bus (15 seats).

NOTES:

Although designated as a battalion, the symbol used was that of a regiment. The unit commander was in an “R” (*Regimentskommandeur*) billet and wore a second hat of the Army Surgeon.

When the chemical field laboratory was not authorized, the totals were reduced in the battalion headquarters by 2 enlisted men and the light truck.

The headquarters provided a staff for the Army Surgeon and enabled him to control all the medical units and personnel under the Army’s command. It contained medical specialists such as pharmacists and lab assistants. Furthermore, it provided a team of specialized doctors in the “Group of Consulting Physicians”, which included 3 surgeons, 3 assistant surgeons, 1 internist, 1 assistant internist, 1 ophthalmologist, 1 pharmacologist (for chemical warfare wounds), 1 pathologist, 1 assistant pathologist, 1 hygienist, 1 assistant hygienist, 1 otologist, 1 psychiatrist, 1 assistant psychiatrist, and 1 assistant bacteriologist. There were enlisted assistants for the corresponding physicians as well as medical specialists.

Casualty Transport Battalion

**KStN 1303 *)**

01.02.1941

Headquarters, Casualty Transport Battalion

Co Hqs: 2 mcl w/sc; 1 car (light); 1 bus (light).

KStN 1361

01.10.1937

Casualty Transport CompanyCo Hqs: (#1-3-0-19); 1 bicycle; 1 mcl w/sc; 1 car (light); 3 trucks for personnel and equipment transport (medium).
3 Transport Plt: (#2-0-6-51); 1 mcl w/sc; 1 truck for field kitchen (medium).**NOTES:**

This battalion was to provide care and escort service for casualties being transported by rail. Motor vehicles were provided for local logistics. Most of the men were stretcher bearers.

Movement of the unit itself was supposed to be by rail; although it could be moved by platoons with the available motor vehicles.

A KStN for motorized casualty transport battalions had not yet been issued at this time. However, the three battalions would have probably been authorized an additional six medium trucks to fully motorize them.

 1 trailer (generator 220 Volts, 15/18 kW)
- KStN 1352 *) Motorized Military Hospital**
 01.02.1941 Hospital: (# 5-0-12-31); 1 mcl w/sc; 1 car (medium); 4 trucks for personnel and equipment transport (light); 2 motor buses (medium).
- KStN 1354 *) Motorized Light Casualty Hospital**
 01.02.1941 Hospital: (#5-2-13-14); 1 mcl w/sc; 1 car (medium); 2 trucks for personnel and equipment transport (light); 1 motor bus (medium).

NOTES:

Although designated as a battalion, the symbol used was that of a regiment. The unit commander was in an "R" (*Regimentskommandeur*) billet.

The Military Hospitals were capable of providing care for 500 patients each. In addition to the Army personnel, the hospital was authorized seven female nurses (not included in the total above). It was usually housed in an existing hospital, or at the very least permanent buildings, (schools, official buildings, factories, etc.), which had a water supply, electricity, and heating. The hospital was equipped with field-x-ray equipment and sterilization apparatus, and set up bacteriological, chemical, and pathological departments, making it possible to work in hospital-near conditions. In addition, units for special injuries, (brain, jaw, eye, ear, etc.), could be set up as needed.

The Light Casualty Hospitals could have as many as 1000 beds each for light casualties and recuperating wounded.

When the hospitals were stationary, motor vehicles were also used to transport patients and supplies.

Units with limited motor vehicle allotments and those consisting of personnel only were used to man existing hospitals in the occupied territories.

Fourteen independent motorized military hospitals (Nos. 901 – 914) had been raised on 13.06.41, but were still forming in Greater Germany at this time.

 1 truck for fuel and equipment (light).

NOTES:

The *KStN 1310* and *KStN 1313* describe medical companies (in later KStN to be designated as Type a) which were to provide medical care to the GHQ troops assigned to armies.

Those organized under *KStN 1314* were normally medical companies for divisions. These particular GHQ companies were raised for various GHQ divisional sized units. In case this divisional sized formation had two medical companies, one of the two companies did not have a dentist in the 2nd (Clearing Station) Platoon. One divisional medical company therefore had 1 light truck and its enlisted driver, as well as the officer dentist less.

Motorized Personnel Decontamination Company

KStN 1379 *)
 01.02.1941

Motorized Personnel Decontamination Company

Co Hqs: (# 1-0-0-3); 1 mcl; 1 car (light).

1st (Personnel Decontamination) Platoon:

Hqs Section: (# 1-0-1-1); 1 mcl; 1 car (medium).

1st (Provost Marshal) Section: (# 0-0-1-8).

2nd (Bathing) Section: (# 0-0-1-10); 2 trucks for tents (light); 1 truck for personnel (medium).

3rd Section (crew for water bowser): (# 0-0-1-6); 2 water bowsers (94).

4th (Replacement Clothing) Section: (# 0-0-1-10); 5 trucks for clothing (medium).

2nd (Equipment Decontamination) Platoon:

Hqs Section: (# 0-0-1-0).

1st (Contaminated Clothing) Section: (# 0-0-1-8); 1 truck for poisoned clothing (light); 1 truck for personnel (medium).

2nd (Equipment and Weapons Decontamination) Section: (# 0-0-1-8); 1 truck for equipment (light).

3rd Section (crew for clothing decontamination truck): (# 0-0-1-12); 3 clothing decontamination trucks (93).

Service Detachment:

Hqs Section: (# 0-0-1-2); 1 car (light).

1st Rations Section: (# 0-0-3-5); 1 truck for rations; 1 truck for field kitchen (medium).

2nd Maintenance Section: (# 0-0-1-3); 1 maintenance car (2/40); 1 truck for fuel (medium).

NOTES:

Personnel decontamination companies were part of the Medical Inspectorate, not the Chemical Warfare Inspectorate. Designed to be sent wherever chemical weapons were used, the company could decontaminate personnel, clothing, weapons, as well as equipment. It carried supplies of replacement clothing, and could process approximately 150 men per hour.

LAZARETTZÜGE Hospital Trains

Hospital
TrainMixed
Hospital
TrainLight
Casualty
Train

KStN 1371 *) **Hospital Train** [Battalion echelon unit]
01.10.1937 Train: (# 3–1–11–20) plus one female surgical nurse and one female nurse.

KStN 1371 *) **Mixed Hospital Train** [Battalion echelon unit]
01.10.1937 Train: (# 2–1–11–15) plus one female surgical nurse and one female nurse.

KStN 1376 *) **Light Casualty Train** [Company echelon unit]
01.10.1937 Train: (# 1–0–10–12).

NOTES:

All medical facilities, including hospital trains, within the jurisdiction of the Chief of Transport were under the First Medical Officer at the Chief of Transportation of the Armed Forces High Command (*Leitender Sanitätsoffizier beim Chef des Transportwesens OKW*).

The main difference between the trains, although having the same *KStN*, was that the hospital train (*LZ = Lazarettzug*) had only beds for patients, whereas the mixed hospital train (*GLz = Gemischter Lazarettzug*) had beds and seats, and also less medical personnel.

The light casualty trains (*LKz = Leichtkranken zug*) transported patients requiring less care, and had less specialist medical personnel.

A standard hospital train consisted of 37 wagons, including 27 ambulance carriages, comprising 297 beds.

It was constituted as follows:

- 1 locomotive
- 1 baggage and supply wagon
- 1 officer ambulance carriages (8 beds)
- 14 enlisted ambulance carriages (11 men)
- 1 carriage for 10 medics
- 1 leisure carriage
- 1 doctors' carriage (2 doctors & 1 official)
- 1 operation and apothecary carriage
- 1 kitchen wagon with ration supplies storage
- 1 carriage for 10 medics
- 13 enlisted ambulance carriages (11 men)
- 1 leisure carriage

The sequence in which the wagons and carriages were hooked up could be changed at the discretion of the doctor in charge of the train.

VETERINÄRKOMPANIE

Veterinary Company

KStN 1415 *)

Veterinary Company for 150 sick horses, and 150 remounts

01.02.1941

Co Hqs: (# 2-0-4-4); 4 bicycles; 1 mcl; 1 car (light); 2 riding horses.

Collection Det: (# 1-0-3-30); 1 mcl w/sc; 6 trucks for horse transport (heavy); 1 trailer (veterinary equipment – *Sd.Ah.* 8); 1 riding horse; 2 horse transport wagons (*Vf.* 1), 8 draught horses.Hospital Det: (# 1-0-8-61); 2 bicycles; 2 riding horses; 1 wagon for veterinary equipment (*Hf.* 1), 2 draught horses; 1 large farrier wagon (*Hf.* 1/13), 2 draught horses; 3 wagons for equipment (*Hf.* 1), 6 horses; 1 heavy field wagon for baggage (*Hf.* 2), 2 horses.Remount Det: (# 0-0-9-80); 3 riding horses; 35 riding horses as remounts; 95 draught horses as remounts; 1 large farrier wagon (*Hf.* 1/13), 2 draught horses; 1 heavy field wagon for baggage (*Hf.* 2), 4 horses; 2 wagons for equipment (*Hf.* 1); 2 school wagons. [these latter four wagons to be drawn by remounts.]Service Det: (# 0-0-2-18); 2 field kitchens (*Hf.* 11 or *Hf.* 13), 4 draught horses; 3 wagons for rations (*Hf.* 1), 6 horses; 3 trucks for rations (medium).**NOTES:**

This organization represents the standard general purpose veterinary company as found in all divisions that had animals. These particular GHQ companies were raised for the security divisions, (which did not have a veterinary element at this time), and various other divisional sized units.

Unfortunately, no KStN earlier than that of 01.09.1944 has been found, and this is the basis for the organization depicted above. Note that many changes took place in organization between 1941 and 1944 for all units of the German Army.

INTRODUCTION TO GERMAN SOFT-SKINNED MOTOR VEHICLES

Identification and Numbering System

The German Wehrmacht identified its motor vehicles by make, by type, by load, by mobility, by purpose, by number of seats, and/or by number. The latter, *Kraftfahrzeug (Kfz.)* and *Sonderkraftfahrzeug (Sd.Kfz.)* numbers, indicated the purpose but not manufacturer of the vehicle. Early in the war, this series of numbers were reasonably well adhered to, although some vehicles were only classified by their load and mobility. As the war continued, the numbering system fell into disuse. The details of the numerical classifications are given on the next pages. The classifications were:

Kfz. No. Nomenclature

- 1 – 10 light personnel carriers (*le. PKW*)
- 11 – 20 medium personnel carriers (*m. PKW*)
- 21 – 30 heavy personnel carriers (*s. PKW*)
- 31 – 40 light load carriers (*le. LKW*)
- 41 – 50 medium load carriers (*m. LKW*)
- 51 – 60 heavy load carriers (*s. LKW*)
- 61 – 70 light cross-country load carriers (*le. gl. LKW*)
- 71 – 80 medium cross-country load carriers (*m. gl. LKW*)
- 81 – 90 heavy cross-country personnel carriers (*s. gl. PKW*),
and, light cross-country load carriers (*le. gl. LKW*)

The heavy personnel carrier and the light load carrier had the same numbers. Same chassis, different bodies.

Classifications did not always correspond to the actual usage. Mobility for personnel and load carriers, whether military or commercial versions, was defined either as cross-country (indicated by the prefix “*geländegängig*”, abbreviated to “*gl.*”, i.e. cross-country), or road-bound, in which case either the suffix “(*o.*)” was added, or the suffix was omitted altogether.

Commercial vehicles could be directly purchased from the manufacturer, or, upon mobilization, requisitioned from the civilian economy. Indeed 63% of all motor vehicles in the German Army were requisitioned by September 1939.

German Load Carriers

Load carriers came in two versions (truck, i.e. open/with a bed; and van, i.e. closed/with a body instead of a bed), and in two types (commercial and military). As indicated above, the Germans used both numbered and unnumbered series of load carriers. Load carriers with and without “*Kfz.*” numbers came in three different load classifications:

- Light up to 2-ton
- Medium 3-ton
- Heavy 4.5-ton and over.

Load carriers with over a 5-ton load factor were only bought in the commercial versions.

German Commercial Load Carriers in Military Use

up to 2-ton (light)	Adler	W61
	Borgward	L1400
	Daimler-Benz	L1500, L1500S, L1500A
	Phanomen	Granit 25H; 1500S, 1500A
	Opel	Blitz 2,5-32
	Steyr (Ost. Daimler)	1500A/01, 1500A/02, 2000A
3-ton (medium)	Borgward	B3000S, B3000A
	Daimler-Benz	L3000, L3000S, L3000A
	Ford	G21T; V3000, V3000S
	KHD (Magirus)	3000S, 3000A
	MAN	E2; E3000
	Opel	Blitz 3,6-36S, Blitz 6700A
4.5-ton (heavy)	Büssing-NAG	4500S, 4500A
	Daimler-Benz	L4500S, L4500A
	Gräfe & Stift	V7DW
	MAN	ML4500S, ML4500A
6.5-ton	Büssing-NAG	6500
	Daimler-Benz	L6500
	Krupp	LD6,5
	MAN	F4
	Vomag	6LR-647, 6LR-652
	Tatra	6500A
9-ton	Büssing-NAG	801, 802
	Faun	L9000D567

German Personnel Carriers

Personnel carriers, with or without numbers, were also classified according to their mobility and engine size:

- Light up to 1500cc
- Medium up to 3000cc
- Heavy over 3000cc

Personnel carriers were either civilian or military. Civilian and later also military vehicles were identified by the engine size – and sometimes the number of seats.

German Motorcycles

There were a multitude of motorcycle types in the German Army, classified according to engine size:

- Light up to 350cc
- Medium up to 500cc
- Heavy over 500cc

Motorcycles came in solo and sidecar versions. For the heavy motorcycles with sidecars, the sidecar wheel was power-driven. Some motorcycles had a light machine-gun mounted on the sidecar. The side cars were also used to carry light mortars, ammunition, as well as personnel.

The Einheits-Vehicle-Program

The Einheits Program was an attempt by the German Armed Forces in the 1930s to produce a series of standardized vehicles. They were based on complicated 4 x 2, 4 x 4, and 6 x 4 chassis, with varying bodies, each conceived for a specific role.

Four chassis were finally produced. They were designated the light (*le. E-PKW*), the medium (*m. E-PKW*), as well as the heavy (*s. E-PKW*) personnel carriers. The fourth was the light load carrier (*le. E-LKW*, also known as the “*Einheits-Diesel*”). This light load carrier, produced between 1937 and 1940, had a 6 x 6 chassis capable of transporting 2.5-tons, and was powered by a diesel engine, (one of the few WWII German vehicles so powered).

Early Einheits-PKW all had stub axles on both sides for the spare wheels, which were supposed to assist the vehicles in crossing rough terrain. This feature was dropped in later models.

Light load carrier chassis were also fitted with passenger bodies. A typical example of this was the *le. Einheits-LKW*, and later the Steyer 1500.

The Einheits Vehicle Program ran into considerable difficulties owing to production and maintenance complications. The design proved too sophisticated for field use, where maintenance and spare parts were in short supply. The complicated two-axle steering caused particular problems in maintenance. The *le. Einheits-LKW* proved the only one that was a successful design.

The Schell Vehicle Program

The Einheits Program could not meet the motor vehicle needs of the German Armed Forces. In 1938, the Schell Program was initiated. It standardized the number of Einheits vehicles at four, (see paragraph above), and provided a limited number of alternative commercial vehicles with all-wheel drive. It reduced the large variety of models in both commercial and military production from 113 to 30 load carriers, from 52 to 10 personnel carriers, and from 150 to 30 motorcycles, which, as an added benefit, enabled the German Army to commandeer civilian vehicles in time of need without drastically complicating the replacement and spare parts situation. The Schell Program vehicles did not always have the engine performance required for military use.

Neither the Einheits nor the Schell Programs provided enough vehicles for the expanding German Armed Forces. However, no solution was ever found for this problem, and Germany was severely handicapped by a lack of motor vehicles in World War II. Even the incorporation of captured enemy vehicles and the production facilities of occupied countries was unable to remedy this problem.

The Raupenschlepper Ost (RSO)

The Russian Campaign quickly demonstrated that German wheeled vehicles were totally inadequate when it came to moving through mud and snow. This lack of good cross-country mobility led to the development of the Raupenschlepper Ost, created to meet the needs of the infantry for a fully-tracked motor vehicle that could move in all terrain. It was ideal also because it did not move very much faster than the marching infantry. This family of vehicles was produced without the standard identifying numbers being allocated.

The Maultier

The lack of good cross-country mobility also led to field improvisations. One of which was so successful that it was produced in large amounts by German industry. The Maultier was basically a truck with tracks and drive train components similar to that of a light tank instead of a rear axle and wheels. The Germans produced two weight classes, namely the Sd.Kfz. 3 based on the medium truck, (initially with a 2-ton payload, then increased to 3 tons) and the Sd.Kfz. 3/5, based on the 4.5-ton truck, (initially with a 4-ton payload, then increased to 4.5 tons).

The Schwere Wehrmachtsschlepper

A simplified and standardized 6-ton halftrack began production in late 1943. Production was low, with only 1000 being produced during the war.

GERMAN NUMBERED MOTORIZED SOFT-SKINNED VEHICLES

Kfz.	German Nomenclature	Description	Makes & Models
1	le gl PKW (‘Kübelwagen’)	light cc personnel carrier (3 and 4-seater) Hanomag - all models	le. Einheits-PKW BMW 303, 309, 315, 319, 3/15, 4/20PS Daimler-Benz 170-V Dixie 3/15 Opel P-4 Skoda Popular 1100 Steyr 250 Volkswagen Type 82, 87, etc.
1/20	le gl schwimm-PKW	light amphibious cc personnel carrier (4-seater)	Volkswagen Type 128 and 166
2	le Nachrichten-Kw	light cc signals carrier	le. Einheits-PKW
2/1	le Fernsprech-Kw	light cc telephone carrier	BMW 309, 319, 3/15, 4/20
2/2	le Funk-Kw	light cc radio carrier	Hanomag - all models
2/40	le Instandsetzungs-Kw	light cc maintenance section carrier (all 2 seaters with equipment storage in the back)	Daimler-Benz 170-V Volkswagen Type 82, 87, etc.
3	le Messtrupp-Kw	light cc calibration section carrier	le. Einheits-PKW BMW 309 Daimler-Benz 170-V Steyr 250 Volkswagen Type 82, 87, etc.
4	le Truppen-Luftschutz-Kw	light cc antiaircraft carrier (dual MG)	le. Einheits-PKW
5	m gl Kessel-Kw	medium cc tanker	m. Einheits-PKW
11	m gl PKW	medium cc personnel carrier	m. Einheits-PKW
12	m gl PKW mit Zughaken	medium cc personnel carrier with towing hook (for 37mm ATG, 75mm IG, ammo trailers)	Adler 12N, 3-Gd Daimler-Benz 200, 260, 290, 320 Phänomen Granit 25 Wanderer W-11, W-23S
13	m gl gp PKW (MG)	early armored medium cc car (with one MG)	Adler Standard 6
14	m gl gp PKW (Funk)	early armored medium cc radio car (no armament)	
15	m gl PKW	medium cc personnel carrier	m. Einheits-PKW
15	m gl PKW mit Gerätkasten	medium cc carrier with equipment boxes	Auto Union / Horch 830-R
15/1	m gl Nachrichten-Kw	medium cc signals carriers	Daimler-Benz 340-WK, L1500A
15/1	m gl Fernsprech-Kw	medium cc telephone carrier	Horch 830-R, 830-BL
15/2	m gl Funk-Kw	medium cc radio carrier	Steyr 250
15/4	m gl Funk-Kw	medium cc radio carrier	Stoewer M-12-RW
15/5	m gl Funk-Kw	medium cc radio carrier	
15/6	m gl Funk-Kw	medium cc radio carrier	
15/7	m gl Funk-Kw	medium cc radio carrier	
17	m gl Fernschreibe-Kw	medium cc telex carrier	
16	m gl Meßstelle-Kw	medium cc calibration station carrier	
16	m gl Meßtrupp-Kw	medium cc calibration section carrier	
16/1	m gl Vorwarner-Kw	medium cc advanced warning section carrier	
17	kl Verstärker-Kw	small cc amplifier van	m. Einheits-PKW
17	kl Kabelmess-Kw	small cc wire calibration van	Auto Union / Horch 830-R
17	kl Fernsprechbetriebs-Kw	small cc telephone operations van	
17/1	kl Funktrupp-Kw	small cc radio section van	
17/2	kl Fernsprechtrupp-Kw	small cc telephone section van	
17/3	kl Funk-Kw	small cc radio van	
18	s gl PKW	heavy cc personnel carrier	m. Einheits-PKW
18	Gefechts-Kw (mit Gerät-kasten & Zughaken)	heavy cc carrier (combat) (with equipment boxes and towing hook)	s. Einheits-PKW Daimler-Benz 200, L1500A Wanderer W 11, W 14
19	Fernsprechbetriebs-Kw	cc telephone exchange van	Krupp L2H-43, Krupp L2H-143
	Fernsprech-Kw	cc telephone van	
	Funk-Kw	cc radio van	
21	s gl PKW (Kommandeurwagen)	heavy cc staff car (sedan or cabrio)	Daimler-Benz G-4 Krupp L2H-143 Cabrio Steyr 640, 1500A Praga Skoda
23	Fernsprech-Kw	cc telephone equipment van	s. Einheits-PKW
24	Verstärker-Kw	cc amplifier equipment van	
31	Sanitäts-Kw (‘Sanka’) [also: Kranken-Kw (‘KrKw’)]	cc ambulance van	s. Einheits-PKW Phänomen Granit 25H Steyr 640, 1500A Adler W-61K Daimler-Benz L1000, L1500E Ford G917, G987, 997, V3000S, V3000A
42	Sammler-Kw	generator / accumulator / battery van	Krupp L3-M42
	Sammlerwerkstatt-Kw	generator repair van	m. LKW (o.)
	Nachrichtenwerkstatt-Kw	signals repair van	
	Werkstatt-Kw	workshop van	
43	Flakauswert-Kw	antiaircraft evaluation van	
44	Sauer- und Stickstoff-Erzeugungs-Kw	Oxygen and Nitrogen generation van	
51	Werkstatt-Kw	workshop van	m. LKW (o.) s. LKW (o.)

NOTES:

The early armored cars (*Kraftfahrzeug 13* and *14*) were obviously not soft-skinned vehicles. It is not clear why they were included within this listing and not in the special military motor vehicle (*Sonderkraftfahrzeug*) listing.

Abbreviations and Definitions:

“Carrier”	indicates an open vehicle, covered by a canvas top.
“Truck”	indicates a cargo vehicle with an open payload area, covered by a canvas top.
“Van”	indicates a cargo vehicle with a fully or partially enclosed payload area (body).
“Prime-Mover”	indicates a vehicle for towing equipment, usually modified and adapted for that equipment.
“Sedan”	indicates a passenger vehicle (car) with a closed body.
“Cabrio”	indicates an open passenger vehicle (car) covered by a canvass top.
“cc”	indicates a vehicle with cross-country capability.

<i>A</i>	<i>Allrad</i> : all-wheel-drive version. (Makers identification).
<i>S</i>	<i>Steuerermässigt</i> : (taxed reduced) qualified for 33% motor vehicle tax reduction, introduced as incentive to increase demand for off-road capable trucks.
<i>(o.)</i>	<i>(ohne)</i> handelsüblich : commercial vehicle.
<i>Kfz.</i>	<i>Kraftfahrzeug</i> : commercially available chassis and drive train with military body.
<i>Sd.Kfz.</i>	<i>Sonder Kraftfahrzeug</i> : specially military body and chassis.
<i>le. / lei.</i>	<i>leicht</i> : light
<i>m.</i>	<i>mittler</i> : medium
<i>s.</i>	<i>schwer</i> : heavy
<i>LKW</i>	<i>Lastkraftwagen</i> : load (cargo) motor vehicle (truck or van)
<i>PKW</i>	<i>Personenkraftwagen</i> : personnel (passenger) motor vehicle (car)
<i>gl.</i>	<i>geländegängig</i> : cross-country
<i>Kw.</i>	<i>Kraftwagen</i> : motor vehicle
<i>kl.</i>	<i>klein</i> : small/light
<i>gr.</i>	<i>gross</i> : large/heavy
<i>gp.</i>	<i>gepanzert</i> : armored
<i>wg.</i>	<i>wassergängig</i> : amphibious
<i>schw.</i>	<i>schwimmfähig</i> : amphibious (alternate)

GERMAN SPECIAL MILITARY VEHICLES

Sd.Kfz. No.	German Designation « German Abbreviation »	Description Main Armament [Ammunition carried]
2	Kleines Kettenkrad « KK »	0.5-ton light halftrack n/a
2/1	Kleines Kettenkrad (Feldfernkabel) « KK (FFK) »	0.5-ton halftrack with telephone cable n/a
2/2	Kleines Kettenkrad (schwere Feldfernkabel) « KK (s. FFK) »	0.5-ton halftrack with heavy telephone cable n/a
3	Gleisketten-Lastkraftwagen 2-ton (Maultier) « 2-ton <i>Maultier</i> »	halftracked 2-ton truck n/a
3/4	Gleisketten-Lastkraftwagen 2-ton (Maultier) (Krankenwagen) « 2-ton <i>Maultier</i> (KrKw) »	halftracked 2-ton ambulance n/a
3/5	Gleisketten-Lastkraftwagen 4.5-ton (Maultier) « 4.5-ton <i>Maultier</i> »	halftracked 4.5-ton truck n/a
4	Gleisketten-Lastkraftwagen 3-ton (Maultier) gepanzert (Munitionskraftwagen) « gep. <i>Maultier</i> (muni) »	armored halftracked truck for ammunition transport [transports 20 150mm rockets]
4/1	15cm Panzerwerfer 43 « Pz.Werf. 43 »	armored halftracked truck with rocket launcher 150mm rocket launcher (10 tubes) [20]
6	mittlerer Zugkraftwagen 5-ton (Pionier-Ausführung) « m. Zgkw. 5t (Pion. Ausf.) »	5-ton halftrack (engineer version) n/a
6/1	mittlerer Zugkraftwagen 5-ton (Artillerie-Ausführung) « m. Zgkw. 5t (Artl. Ausf.) »	5-ton halftrack (artillery version) n/a
6/2	3,7cm Flak 36 auf Fahrgestell m. Zugkraftwagen 5-ton « 3,7cm Flak (Sfl) auf lei. Zgkw. 5 t »	self-propelled medium antiaircraft gun on 5-ton halftrack 37mm Flak 18 or 36 [?]
7	mittlerer Zugkraftwagen 8-ton « m. Zgkw. 8t »	8-ton halftrack n/a
7/1	2cm Flakvierling auf Fahrgestell mittlerer Zugkraftwagen 8-ton « 2cm Flakvierl. (Sf) auf Zgkw. 8t »	self-propelled light quad antiaircraft gun on 8-ton halftrack 20mm quad Flak 38 L/112.5 [600]
7/2	3,7cm Flak 36 /Sfl auf Fahrgestell mittlerer Zugkraftwagen 8-ton « 2cm Flakvierl. (Sf) auf Zgkw. 8t »	self-propelled antiaircraft gun on 8-ton halftrack 37mm Flak 36 L/98 [?]
7/6	mittlerer Zugkraftwagen 8-ton (Flakmess) « Zgkw. 8t Flak-Mess »	8-ton halftrack for antiaircraft calibration equipment n/a
8	schwerer Zugkraftwagen 12-ton « s. Zgkw. 12t »	12-ton halftrack n/a
8	8,8cm Flak (Sf) auf gepanzerten Zugkraftwagen 12-ton « 8,8cm Flak (Sf) auf gep. Zgkw. 12t »	self-propelled heavy antiaircraft gun on armored halftrack 88mm Flak L/56 [40]
9	schwerer Zugkraftwagen 18-ton « Zgkw. 18t »	18-ton halftrack n/a
9/1	schwerer Drehkranwagen (Hebekraft 6 ton) « s. Drehkran (6 t) »	18-ton halftrack with 6-ton revolving crane (manufactured by Bilstein) n/a
9/2	schwerer Drehkranwagen (Hebekraft 10 ton) « s. Drehkran (10 t) »	18-ton halftrack with 10-ton revolving crane (manufactured by Demag) n/a
10	leichter Zugkraftwagen 1-ton « lei. Zgkw. 1t »	1-ton halftrack n/a
10/1	leichter Gasspürwagen « lei. Zgkw. (Gas-Spür) »	1-ton halftrack, light gas detection vehicle with sprinkler n/a
10/2	leichter Entgiftungskraftwagen « lei. Zgkw. (Entg.) »	1-ton halftrack, light decontamination vehicle n/a
10/3	leichter Sprühkraftwagen « lei. Zgkw. (Sprüh) »	1-ton halftrack, light bulk decontamination vehicle n/a
10/4	2cm Flak (Sf) auf Fahrgestell leichter Zugkraftwagen 1-ton « 2cm Flak (Sf) auf lei. Zgkw. 1t »	self-propelled light antiaircraft gun on 1-ton halftrack 20mm Flak 30 L/112.5 [280]
10/5	2cm Flak (Sf) auf gepanzerten Fahrgestell leichter Zugkraftwagen 1-ton « 2cm Flak (Sf) auf gp. lei. Zgkw. 1t »	self-propelled light antiaircraft gun on armored 1-ton halftrack 20mm Flak 38 L/112.5 [280]
11	leichter Zugkraftwagen 3-ton « lei. Zgkw. 3t »	3-ton halftrack n/a
11/1	Nebelkraftwagen « m. Zgkw. (Nebel) »	3-ton halftrack for towing rocket launchers n/a [10,5cm Nbl.W. 35: 80 rockets; 15cm Nbl.W. 41: 36 rockets; 28/32cm Nebelwerfer 41: 12 rockets plus launching frames]
11/2	mittlerer Entgiftungskraftwagen « m. Zgkw. (Entg.) »	3-ton halftrack, medium decontamination vehicle n/a
11/3	mittlerer Sprühkraftwagen « m. Zgkw. (Sprüh) »	3-ton halftrack, medium chemical spraying vehicle (bulk decontamination) n/a

300	Minenräumwagen B-I & B-II « Minenräum-Wg. »	tracked mineclearing vehicle, Model B-I & B-II n/a
301	schwere Ladungsträger B-IV « B-IV »	tracked, remote-controlled demolition vehicle, Model B-IV n/a
302	Leichte Ladungsträger Goliath, Ausf. A « Goliath »	tracked, remote-controlled demolition vehicle, Model A (electric) n/a
303	Leichte Ladungsträger Goliath, Auf. B « Goliath »	tracked, remote-controlled demolition vehicle, Model B (gasoline) n/a
304	mittlere Ladungsträger « Springer »	tracked, remote-controlled demolition vehicle n/a

Notes:

For the sake of completeness, this list includes the unnumbered vehicles belonging to the same family of vehicles.

GERMAN SPECIAL MILITARY TRAILERS AND MILITARY TRAILERS

German Trailers

Besides the numbered trailers listed below, there were also trailers without numbers. These were identified by load factor, number of axles, open or covered, and/or purpose. Furthermore, upon mobilization, the German military requisitioned trailers from the civilian sector. These trailers were strictly for use by road-bound units, and only found in rear-echelon units where they provided a valuable increase in transportation capacity. There were even trailers built specifically for towing horse drawn equipment with motor vehicles.

A few military horse-drawn vehicles (wagons and carts) were modified for towing by motor vehicles by the addition of wheel and parking brakes, rubber-rimmed or even pneumatic tires, rear lights, and towing arrangements.

Some horse-drawn wagon and carts were issued with towing bars allowing them to be towed by motor vehicles.

It was not unusual, specially in the non-motorized units, that unmodified horse-drawn vehicles be towed by motor vehicles. Naturally at comparatively low speeds.

Although many combat units had trailers for guns, ammunition, components of heavy guns, generators, bridging equipment, etc., convoy speed of all vehicles was reduced when towing trailer, and maneuverability was hampered off-road. However, the expense of motor vehicles made the use of trailers an attractive alternative.

<i>Sd.Anh.</i>	<i>=Sonder Anhänger</i>	<i>Special Trailers with numbers</i>
Sd.Anh. 1	(1 Achsig) für kleines Kettenkrad	trailer (1 axle) for Kettenkrad

Sd.Anh. 7	(1 Achsig) für Munition (Nbl. Wfr.)	trailer (1 axle) for Nebelwerfer ammunition
Sd.Anh. 8	(1 Achsig) für Veterinärgerät	trailer (1 axle) for veterinary equipment
Sd.Anh. 11	(1 Achsig) für Entseuchung mit Brausevorrichtung	trailer (1 axle) for decontamination with showers
Sd.Anh. 13	(1 Achsig) für M-Boot (100 PS MB 41)	trailer (1 axle) for motorboat (100 HP Type MB 41)
Sd.Anh. 14	(1 Achsig) für Abschleppzwecke	trailer (1 axle) for motor vehicle towing and recovery
Sd.Anh. 15	(1 Achsig) für Fahrseil	trailer (1 axle) for winch
Sd.Anh. 20	(1 Achsig) für Erdkabel	trailer (1 axle) for underground telephone cable
Sd.Anh. 21	(2 Achsig) für Fernsprechbau	trailer (1 axle) for telephone construction
Sd.Anh. 22	(1 Achsig) Azetylen-Erzeugeranhänger	trailer (1 axle) for generator for Acetylene gas
Sd.Anh. 23	(1 Achsig) für Sammlerladegerät D	trailer (1 axle) for Generator Type D for recharging batteries
Sd.Anh. 23/1	(1 Achsig) für Maschinensatz 220/65V; 4,5/1,3 Kw	trailer (1 axle) for Generator 220/65 Volt, 4.5/1.3 Kw
Sd.Anh. 24	(1 Achsig) für Maschinensatz I	trailer (1 axle) for Generator Type I
Sd.Anh. 24	(1 Achsig) für Maschinensatz A (Drehstrom 15k VA)	trailer (1 axle) for Generator Type A for 15k AC
Sd.Anh. 25	(1 Achsig) für Feldfernkabel	trailer (1 axle) for heavy telephone field cable
Sd.Anh. 25/1	(1 Achsig) für Maschinensatz F	trailer (1 axle) for Generator Type F
Sd.Anh. 25/2	(1 Achsig) für Nachrichtengerät	trailer (1 axle) for signal equipment
Sd.Anh. 25/3	(1 Achsig) Beleuchtungsanhänger N	trailer (1 axle) for Lighting Equipment Type N
Sd.Anh. 25/4	(1 Achsig) Nachschubanhänger	trailer (1 axle) for supply
Sd.Anh. 25/3	(1 Achsig) Beleuchtungsanhänger N	trailer (1 axle) for lighting equipment
Sd.Anh. 26	(1 Achsig) für Führungsfernkabel	trailer (1 axle) for command telephone heavy cable
Sd.Anh. 28	(1 Achsig) für Peilanhänger (für Peiltrupp (LMW)	trailer (1 axle) for direction finder of a Direction Finding Section
Sd.Anh. 29	(1 Achsig) für für gepanzerten Munitionsschlepper	trailer (1 axle) for ammunition (for armored ammunition carrier)
Sd.Anh. 30	(1 Achsig) Wassertankanhänger	trailer (1 axle) for water tank
Sd.Anh. 31	(1 Achsig) für Munition Type A	trailer (1 axle) for ammunition Type A
Sd.Anh. 31/1	(1 Achsig) für Munition (7,5cm StuK 40)	trailer (1 axle) for ammunition for 7.5cm Assault Gun Model 40
Sd.Anh. 32	(1 Achsig) für Munition (3,7cm Pak)	trailer (1 axle) for ammunition for 3,7cm Antitank Gun
Sd.Anh. 32/1	(1 Achsig) für Munition (7,5cm)	trailer (1 axle) for ammunition for 7.5cm
Sd.Anh. 32/2	(1 Achsig) für Munition (s. Pz Bü 41)	trailer (1 axle) for ammunition for heavy antitank rifle Model 41
Sd.Anh. 32/3	(1 Achsig) für s. Pz Bü 41 auf leichte Feldlafette	trailer (1 axle) for heavy antitank rifle Model 41 on light field carriage
Sd.Anh. 33	(1 Achsig) für Nebelwerfermunition	trailer (1 axle) for ammunition (rocket launcher)
Sd.Anh. 34	(1 Achsig) für Entgiftungsanhänger	trailer (1 axle) for decontamination
Sd.Anh. 35	(1 Achsig) für Teigknetanhänger	trailer (1 axle) for dough mixer
Sd.Anh. 36	(1 Achsig) für leichten Ladungsschlepper	trailer (1 axle) for remote control vehicle (Goliath)
Sd.Anh. 40	(1 Achsig) Panzerbergeanker als Anhänger	trailer (1 axle) for tank recovery anchor
Sd.Anh. 46	(1 Achsig) schmalspurig	trailer (1 axle) with narrow wheel spacing
Sd.Anh. 51	(1 Achsig) Beleuchtungsanhänger (Vermessungstrupp (mot))	trailer (1 axle) for electricity generator in enclosed body for Calibration Detachment
Sd.Anh. 51	(1 Achsig) für 2cm Geschütz 30 mit Munition- und Zubehörkasten	trailer (1 axle) for 2cm antiaircraft gun Model 30 with ammo and equipment boxes
Sd.Anh. 51	(1 Achsig) für Scheinwerfer 60cm mit Zubehörkasten	trailer (1 axle) for 60cm antiaircraft searchlight with equipment boxes
Sd.Anh. 51	(1 Achsig) für 2cm Flak 38 mit Munition- und Zubehörkasten	trailer (1 axle) for 20mm antiaircraft gun Model 38 with ammo and equipment boxes
Sd.Anh. 52	(1 Achsig) für 2cm Flak Vierling 38/1 mit Munition- und Zubehörkasten	trailer (1 axle) for 2cm quad antiaircraft gun Model 38/1 with ammo and equipment boxes
Sd.Anh. 52	(1 Achsig) für 3,7cm Flak 36/37 mit Munition- und Zubehörkasten	trailer (1 axle) for 3.7cm antiaircraft gun Model 36/37 with ammo and equipment boxes
Sd.Anh. 52	(1 Achsig) für Kommando-Gerät 40	trailer (1 axle) for antiaircraft fire direction computer Model 40
Sd.Anh. 53	(1 Achsig) für Kommando-Hilfsgerät 35	trailer (1 axle) for antiaircraft auxiliary fire direction computer Model 35
Sd.Anh. 54	(1 Achsig) für Kinotheodolit für Flakmess-Auswerte-Zug	trailer (1 axle) for antiaircraft optical tracking computer for Calibration Evaluation Platoon
Sd.Anh. 55	(1 Achsig) für V-Messgerät Flak	trailer (1 axle) for antiaircraft muzzle velocity calibration equipment
Sd.Anh. 56	(1 Achsig) für 2cm Flak mit Munition- und Zubehörkasten	trailer (1 axle) for 2cm quad antiaircraft gun with ammo and equipment boxes
Sd.Anh. 56	(1 Achsig) für 2cm Flakvierling 38/1 mit Munition- und Zubehörkasten	trailer (1 axle) for 2cm quad antiaircraft gun Model 38/1 with ammo and equipment boxes
Sd.Anh. 57	(1 Achsig) für 3,7cm Flak mit Munition- und Zubehörkasten	trailer (1 axle) for 3.7cm antiaircraft gun with ammo and equipment boxes
Sd.Anh. 58	(1 Achsig) für 3,7cm Flak 43 mit Munition- und Zubehörkasten	trailer (1 axle) for 3.7cm antiaircraft gun Model 43 with ammo and equipment boxes
Sd.Anh. 58	(1 Achsig) für 3,7cm Flak 43/1 mit Munition- und Zubehörkasten	trailer (1 axle) for 3.7cm antiaircraft gun Model 43/1 with ammo and equipment boxes
Sd.Anh. 101	(2 Achsig) für Flakhorchgerät	trailer (2 axle) for antiaircraft sound tracking equipment
Sd.Anh. 101	(2 Achsig) für mittleren Flak-Maschinensatz	trailer (2 axle) for antiaircraft generator for sound tracking equipment
Sd.Anh. 102	(2 Achsig) für Flak-Scheinwerfer 110cm	trailer (2 axle) for antiaircraft searchlight (110cm)
Sd.Anh. 102	(2 Achsig) für Flak-Maschinensatz	trailer (2 axle) for antiaircraft generator for searchlight (110cm)
Sd.Anh. 103	(2 Achsig) für mittlere und schwere Lasten	trailer (2 axle) for medium and heavy cargo
Sd.Anh. 104	(2 Achsig) für 150cm Flak-Scheinwerfer	trailer (2 axle) for 150cm antiaircraft searchlight
Sd.Anh. 104	(2 Achsig) für Maschinensatz 24 Kw für 150cm Flak-Scheinwerfer	trailer (2 axle) for generator Model 24Kw for 150cm antiaircraft searchlight
Sd.Anh. 104	(2 Achsig) für Sperrballonwinde	trailer (2 axle) for winch for antiaircraft barrage balloon
Sd.Anh. 104	(2 Achsig) für Funkmessgerät 39 TD	trailer (2 axle) for antiaircraft radar Model 39TD
Sd.Anh. 104	(2 Achsig) für 3,7cm Flak 18	trailer (2 axle) for 3.7cm antiaircraft gun Model 18
Sd.Anh. 104	(2 Achsig) für Kommandogerät 36	trailer (2 axle) for antiaircraft fire direction computer Model 36
Sd.Anh. 104	(2 Achsig) für Richting-Richtungshörer (RRH)	trailer (2 axle) for antiaircraft sound tracking equipment
Sd.Anh. 105	(2 Achsig) Backanhänger	trailer (2 axle) for baking oven
Sd.Anh. 106	(2 Achsig) Backanhänger	trailer (2 axle) for baking oven
Sd.Anh. 107	(2 Achsig) Grosskühlbehälteranhänger	trailer (2 axle) for refrigeration
Sd.Anh. 108	(2 Achsig) für S-Boot (Pionier-Strumboot 39)	trailer (2 axle) for three assault boats (Engineer Assault Boat Model 39)
Sd.Anh. 109	(2 Achsig) leichter Vermessungsanhänger	trailer (2 axle) for light calibration equipment
Sd.Anh. 109/1	(2 Achsig) leichte Kartendruck-Anhänger	trailer (2 axle) light workshop for map printing

GERMAN SPECIAL MILITARY TRAILERS AND MILITARY TRAILERS

Sd. Anh.	109/2	(2 Achsig) leichte Kartenzeichner-Anhänger	trailer (2 axle) for cartographer
Sd. Anh.	109/3	(2 Achsig) Bildstellen-Anhänger	trailer (2 axle) for photographs
Sd. Anh.	109/4	(2 Achsig) Bildmess-Anhänger	trailer (2 axle) for photogrammetry
Sd. Anh.	109/5	(2 Achsig) Bildkartei-Anhänger	trailer (2 axle) for photo storage
Sd. Anh.	109/6	(2 Achsig) Dunkelkammer-Anhänger	trailer (2 axle) as dark room
Sd. Anh.	109/7	(2 Achsig) Vermessungs-Anhänger	trailer (2 axle) survey workshop
Sd. Anh.	109/8	(2 Achsig) Werkstattanhänger für Feinmechanik	trailer (2 axle) workshop for precision instrument repair
Sd. Anh.	109/9	(2 Achsig) Buchbinder-Anhänger	trailer (2 axle) workshop for book binding
Sd. Anh.	109/10	(2 Achsig) leichter Kartenreproduktions-Anhänger I	trailer (2 axle) light workshop for reproduction Type I
Sd. Anh.	109/11	(2 Achsig) leichter Kartenreproduktions-Anhänger II	trailer (2 axle) light workshop for reproduction Type II
Sd. Anh.	109/14	(2 Achsig) leichter Kopier-Anhänger	trailer (2 axle) light workshop for copying
Sd. Anh.	111	(2 Achsig) schwerer Vermessungsanhänger	trailer (2 axle) for heavy calibration equipment
Sd. Anh.	111/1	(2 Achsig) schwerer Reproduktions-Anhänger	trailer (2 axle) heavy workshop for reproduction
Sd. Anh.	111/3	(2 Achsig) schwerer Kartendruck-Anhänger	trailer (2 axle) heavy workshop for map printing
Sd. Anh.	113	(3 Achsig) für Langerät (8 ton)	trailer (3 axle) for cargo, long (8 ton)
Sd. Anh.	115	Tiefladeanhänger für PzKfpWg 10–12 ton	trailer (2 axle) low boy (also: low bed) for armored vehicles (10 – 12 ton)
Sd. Anh.	116	Tiefladeanhänger für PzKfpWg 22 ton	trailer (4 axle) low boy (also: low bed) for armored vehicles (22 ton)
Sd. Anh.	119	(2 Achsig) für 100 PS-Motorboot	trailer (2 axle) for motorboat (100 HP Type MB 41)
Sd. Anh.	120	(2 Achsig) für 250 PS-Motorboot	trailer (2 axle) for motorboat (250 HP Type MB 42)
Sd. Anh.	121	Tiefladeanhänger für PzKfpWg 65 ton	trailer (6 axle) low boy (also: low bed) for armored vehicles (65 ton)
Sd. Anh.	127	(2 Achsig) Mastanhänger	trailer (2 axle) for mast antenna
Sd. Anh.	141	(2 Achsig) für Pionier-Landungs-Fahrzeug 20-ton	trailer (2 axle) for engineer landing vehicle (20ton)
Sd. Anh.	201	(2 Achsig) für 8,8cm Flak	trailer (2 axle) for 8.8cm antiaircraft gun
Sd. Anh.	202	(2 Achsig) für 8,8cm Flak 37/37	trailer (2 axle) for 8.8cm antiaircraft gun Model 36/38
Sd. Anh.	202	(2 Achsig) für 8,8cm Flak 41	trailer (2 axle) for 8.8cm antiaircraft gun Model 41
Sd. Anh.	203	(2 Achsig) für 10,5cm Flak 38/39	trailer (2 axle) for 10.5cm antiaircraft gun Model 38/39
Sd. Anh.	203	(2 Achsig) für Fahrgerüst für schwere 12,8cm Flak (o)	trailer (2 axle) for mobilizing the static, heavy 12,8cm antiaircraft gun
Sd. Anh.	203	(2 Achsig) Transportbrücke für 12,8cm Flak-Zwilling	trailer (2 axle) for 12.8cm twin antiaircraft gun
Sd. Anh.	204	(2 Achsig) für 5cm Flak 41	trailer (2 axle) for 5cm antiaircraft gun Model 41
Sd. Anh.	204	(2 Achsig) für 200cm Flak-Scheinwerfer	trailer (2 axle) for 200cm antiaircraft searchlight
Sd. Anh.	204	(2 Achsig) für Maschinensatz für 200cm Flak-Scheinwerfer	trailer (2 axle) for generator for 200cm antiaircraft searchlight
Sd. Anh.	204	(2 Achsig) für Maschinensatz 60 kW	trailer (2 axle) for generator Model 60Kw
Sd. Anh.	204	(2 Achsig) für Sperrballonwinde	trailer (2 axle) for winch for barrage balloon
Sd. Anh.	205	(2 Achsig) Rohrwagen für 10,5cm Flak	trailer (2 axle) for barrel wagon for 10.5cm antiaircraft gun
Sd. Anh.	206	(2 Achsig) für 5,5cm Flak 58	trailer (2 axle) for 5.5cm antiaircraft gun Model 58
Sd. Anh.	206	(2 Achsig) für 3,7cm Flak-Zwilling 43	trailer (2 axle) for 3.7cm dual antiaircraft gun Model 43
Sd. Anh.	206	(2 Achsig) für 200cm Flak-Scheinwerfer 44	trailer (2 axle) for 200cm antiaircraft searchlight Model 44
Sd. Anh.	206	(2 Achsig) für Maschinensatz 120 kW	trailer (2 axle) for generator Model 120Kw
Sd. Anh.	206	(2 Achsig) für Funkmessgerät	trailer (2 axle) for antiaircraft radar
Sd. Anh.	206	(2 Achsig) für Flakrakete H3 117 “Schmetterling”	trailer (2 axle) for antiaircraft rocket Model Hs 117 “Schmetterling” (Butterfly)
Sd. Anh.	220	(4 Achsig) für Funkmessgerät	trailer (4 axle) for radar system
Sd. Anh.	220	(4 Achsig) für 12,8cm Flak 40/1	trailer (4 axle) for 12.8cm antiaircraft gun Model 40/1
Sd. Anh.	301	(1 Achsig) für Tankspritze	trailer (1 axle) for fire engine equipment (auxiliary for the fire engine)
Sd. Anh.	302	(1 Achsig) für Schlauchtender	trailer (1 axle) for mobile fire fighting (for independent operation)
Sd. Anh.	319	für Fla-Rakete “Wasserfall”	trailer for antiaircraft rocket “Wasserfall” (Waterfall)
Sd. Anh.	322	für A2 (o) 7,5-ton mit geschlossenem Aufbau	trailer for rocket A2 (o) with enclosed body (7.5 ton)
Sd. Anh.	322/2	für Landescheinwerfer (GI 1500)	trailer for 1500cm landing searchlight Model GI 1500
Sd. Anh.	322/3	für Landescheinwerfer (HgL 1500)	trailer for 1500cm landing searchlight Model Hg LL 150
Sd. Anh.	350	für B2 (3-ton) (o) mit geschlossenem Aufbau	trailer B2 with enclosed body (civilian type)(3-ton)
Sd. Anh.	350/7	Fernsprechvermittlungs-Anhänger	telephone exchange trailer
Sd. Anh.	350/32	Leuchfeueranhänger	generator trailer for airfield beacons
Sd. Anh.	350/33	Leuchfeueranhänger	generator trailer for airfield beacons
Sd. Anh.	350/32	Prüf- und Wartungs-Anhänger für Bordfunk- und Peilgerät	trailer for maintenance and testing of aircraft radio and radar equipment
Sd. Anh.	350/43	Prüf- und Wartungs-Anhänger für Bordfunk- und Peilgerät	trailer for maintenance and testing of aircraft radio and radar equipment
Sd. Anh.	350/?	Anhänger B2 für Ladestation FR	trailer B2 with enclosed body (civilian type)(3-ton) for battery charger for V2 rocket units
Sd. Anh.	363	für B3 (4,5-ton) (o) mit geschlossenem Aufbau	trailer B3 with enclosed body (civilian type)(4.5-ton)
Sd. Anh.	363/1	für B3 (4,5-ton) (o) für Bildbearbeitung	trailer B3 with enclosed body (civilian type)(4.5-ton) for photograph production Type I
Sd. Anh.	363/2	für B3 (4,5-ton) (o) für Bildbearbeitung	trailer B3 with enclosed body (civilian type)(4.5-ton) for photograph production Type II
Sd. Anh.	401	(1 Achsig) Feldküche als Anhänger	trailer (1 axle) mobile field kitchen (“Gulaschkanone”)
Sd. Anh.	422	(1 Achsig) Navigations-Funkpeilanhänger	trailer (1 axle) for direction finding equipment for navigation
Sd. Anh.	447	(2 Achsig) Navigations-Funkpeilanhänger	trailer (2 axle) for direction finding equipment for navigation
Sd. Anh.	450	(2 Achsig) Tragflächen 6 Meter	trailer (2 axle) for transporting wings (6 meters)
Sd. Anh.	451	(2 Achsig) Tragflächen 10 Meter	trailer (2 axle) for transporting wings (10 meters)
Sd. Anh.	450	(2 Achsig) Tragflächen 6 Meter	trailer (2 axle) for wings (6 meters)
Sd. Anh.	454	(2 Achsig) Flugbetriebsstoffkessel-Anhänger	trailer (2 axle) bowser for aircraft fuel
Sd. Anh.	458	(2 Achsig) Waffenabwurfgerät-Anhänger	trailer (2 axle) for bomb transport
Sd. Anh.	459	(2 Achsig) Waffenabwurfgerät-Anhänger	trailer (2 axle) for bomb transport
Sd. Anh.	469	(2 Achsig) Fernschreib-Anschlussanhänger	trailer (2 axle) with enclosed body for telephone switchboard
Sd. Anh.	470	(2 Achsig) Funkanhänger (Kurz- /Langwelle)	trailer (2 axle) with enclosed body for short and medium wave radio station
Sd. Anh.	471	(2 Achsig) Betriebs-Funkempfängeranhänger	trailer (2 axle) with enclosed body for radio receiver operation station
Sd. Anh.	472	(2 Achsig) leichter Leuchfeueranhänger	trailer (2 axle) with enclosed body light generator for airfield beacons
Sd. Anh.	473	(2 Achsig) mittlerer Leuchfeueranhänger	trailer (2 axle) with enclosed body medium generator for airfield beacons

Vsah. = *Versuchsanhänger* *Experimental Trailers*

Vsah.	642	Tiefladeanhänger für Panzerkampfwagen	medium tank transport trailer
Vsah.	654	Tiefladeanhänger für Panzerkampfwagen	light tank transport trailer

Anhänger		Trailers without numbers
(1 Achsig) Anhänger-Fahrgestell 900 kg		trailer (1 axle) chassis (900 kilos)
(1 Achsig) Anhänger-Fahrgestell 1500 kg Baumuster 41		trailer (1 axle) chassis Model 41 (1500 kilos)
(1 Achsig) Anhänger-Fahrgestell 1900 kg		trailer (1 axle) chassis (1900 kilos)
(1 Achsig) Anhänger-Fahrgestell gl. 500 kg		trailer (1 axle) chassis cross-country capable (500 kilos)
(1 Achsig) Anhänger-Fahrgestell gl. 900 kg		trailer (1 axle) chassis cross-country capable (900 kilos)
(1 Achsig) Anhänger-Fahrgestell gl. 1500 kg		trailer (1 axle) chassis cross-country capable (1500 kilos)
(1 Achsig) Anhänger-Fahrgestell gl. 2200 kg		trailer (1 axle) chassis cross-country capable (2200 kilos)

GERMAN SPECIAL MILITARY TRAILERS AND MILITARY TRAILERS

(1 Achsig) Anhänger A1 (0,5 t), offen (o)	trailer (1 axle) Model A1, civilian type, open (500 kilos)
(1 Achsig) Anhänger A1 (0,5 t), offen (o) als Schlauchhaspel für Kfz. 346	trailer (1 axle) Model A1, civilian type, open (500 kilos), for hoses, towed by Kfz. 346
(1 Achsig) Anhänger mit geschlossenem Aufbau (o) für Eisenbahn-Pionier	trailer (1 axle) civian type, enclosed, for Railraod Engineers
(1 Achsig) Anhänger mit geschlossenem Aufbau (o) für Kraftfahrzeug-Parkes	trailer (1 axle) civian type, enclosed, for Motor Vehicle Parks
(1 Achsig) Anhänger gl. für Einheitsbehälter für Kraftstoff	trailer (1 axle) cross-country capable, for standard fuel cans ("Jerry cans")
(1 Achsig) Anhänger für 200-Liter Kraftstoff-Fass	trailer (1 axle) fuel barrel (200 liters)
(1 Achsig) Anhänger für 2x 200-Liter Kraftstoff-Fass	trailer (1 axle) 2 fuel barrels (each 200 liters)
(1 Achsig) Anhänger für Ladungswerfer	trailer (1 axle) for heavy spigot mortar of the engineers
(1 Achsig) Anhänger für M.S. Boot (handelsüblichen Gerät) der Pioniere	trailer (1 axle) for civilian motor boat used by the engineers
(1 Achsig) Anhänger mit Notstromaggregat 12kVA "Carfais" Diesel der Marine	trailer (1 axle) for diesel power generator "Carfais" for the Navy
(1 Achsig) Anhänger mit Notstromaggregat 12kVA "Fimag" Bezin der Marine	trailer (1 axle) for gasoline power generator "Fimag" for the Navy
(1 Achsig) Anhänger für schwere Panzerbüchse 41	trailer (1 axle) for heavy antitank rifle (PzBü 41)
(1 Achsig) Anhänger für Räudegaszellen	trailer (1 axle) for gas bottles (gas used against mange)
(1 Achsig) Anhänger für Verschluss-Sachen der Vermessungs- und Karten-Einheiten	trailer (1 axle) enclosed, lockable, for confidential material of the surveying and mapping units
(1 Achsig) Anhänger offen (o) für Veterinärgerät für Pferdelaazarett	trailer (1 axle) civilian type, open, for veterinary equipment for veterinary hospital
(1 Achsig) Anhänger for V2. Abschussplattform	trailer (1 axle) for firing platform for V2 rocket units
(1 Achsig) Diesel-Eisbereiter als Anhänger	trailer (1 axle) for diesel powered ice maker
(1 Achsig) Brennschluss-Antennen-Anhänger für schiess Fernraketen-Batterien	trailer (1 axle) for antenna for establishing rocket-cut-off for V2 rocket units
(1 Achsig) Grosser Druckluftherzeuger als Anhänger	trailer (1 axle) with large air compressor
(1 Achsig) Fallschirmjägerkarren als Anhänger für das Kettenkrad	cart (1 axle) for Kettenkrad for Fallschirmjäger (Parachute Infantry)
(1 Achsig) Grosse Feldküche als Anhänger	trailer (1 axle) for mobile large field kitchen range
(1 Achsig) Festungskabellötkarren	cart (1 axle) for Fortress Signal Troops, with soldering and other equipment
(1 Achsig) Festungskabelmesskarren	cart (1 axle) for Fortress Signal Troops, with calibration and other equipment
(1 Achsig) schweren Grabenpflug (Entgiftungspflug) als Anhänger	trailer (1 axle) heavy plow, originally for decontamination, but also used for entrenching
(1 Achsig) Handkarren für leichten Ladungswerfer der Pioniere	hand cart (1 axle) for light spigot mortar of the engineers
(1 Achsig) kleiner Kabeltrommel-Anhänger für Fernraketen-Einheit	trailer (1 axle) for light cable drums for V2 rocket units
(1 Achsig) Leitstrahl-Antennen-Anhänger für FR-Einheit	trailer (1 axle) for guiding beam antenna for V2 rocket units
(1 Achsig) Leitstrahl-Kontroll-Anhänger für FR-Einheit	trailer (1 axle) for guiding beam instrumentation for V2 rocket units
(1 Achsig) Lichtbogen-Schweissmaschinensatz auf Anhängerfahrgestell 1500 t	trailer (1 axle) arch welding equipment on chassis Model 41 (1500 kilos)
(1 Achsig) Maschinensatz 110/220 V 24 Kw als Anhänger fahrbar	trailer (1 axle) generator (110/220 Volts, 24 kW)
(1 Achsig) Maschinensatz 220 V 6,5 Kw als Anhänger fahrbar	trailer (1 axle) generator (220 Volts, 6.5 kW)
(1 Achsig) Maschinensatz 220 V (Wechselstrom) 15/18 KvA der Sanitätstruppe	trailer (1 axle) generator (220 Volts, AC, 15 kVA) for the Medical Troops
(1 Achsig) Maschinensatz 220/380 (Drehstrom) 36 KvA als Anhänger fahrbar	trailer (1 axle) generator (220/380 Volts, DC, 36 kVA)
(1 Achsig) Motorspritze als Anhänger fahrbar (o)	trailer (1 axle) motor water pump (civilian type)
(1 Achsig) Anhänger leichter Sprühanhänger	trailer (1 axle) light decontamination spray unit
(1 Achsig) Tragkraftspritzen-Anhänger (Tsga 8)(Bauart 1937)	trailer (1 axle) fire fighting equipment, including a portable water pump Type Tgsa 8/37
(1 Achsig) Tragkraftspritzen-Anhänger (Tsga 8)(Bauart 1939)	trailer (1 axle) fire fighting equipment, including a portable water pump Type Tgsa 8/39
(1 Achsig) Tragkraftspritzen-Anhänger (o)	trailer (1 axle) fire fighting equipment, civilian type, including a portable water pump
(1 Achsig) Troganhänger fürEntgiftungskraftwagen (Kfz. 305/112) des S.H.D.	trailer (1 axle) for decontamination van of the S.H.D. ("Sicherheits- und Hilfedienst")
(1 Achsig) T-Stoff- Vorwärmer-Anhänger für FR-Einheit	trailer (1 axle) for warming fuel (<i>T-Staff</i> = Hydrogensuperoxyd) for the V2 rocket units
(1 Achsig) Wasser-Anhänger 100 liter	trailer (1 axle) bowser for water (1000 liters)
(2 Achsig) Anhänger A2 Einheits-Anhänger 1 t offen (o)	trailer (2 axle) Standard Model A2, civilian type, open (1 ton)
(2 Achsig) Anhänger A2 als Schlauchhaspel für Schlauchkraftwagen (Kfz. 346)	trailer (2 axle) Standard Model A2, civilian type, open (1 ton), for hoses, towed by Kfz. 346
(2 Achsig) Anhänger B2 Einheits-Anhänger 3 t offen (o)	trailer (2 axle) Standard Model B2, civilian type, open (3 ton)
(2 Achsig) Anhänger B2 mit Maschinensatz 220/380 V Drehstrom 60 KvA	trailer (2 axle) Standard Model B2, for generator (220/380 Volts, DC, 60 kVA)
(2 Achsig) Anhänger B3 Einheits-Anhänger 4,5 t offen (o)	trailer (2 axle) Standard Model B3, civilian type, open (4.5 ton)
(2 Achsig) Anhänger E5 Einheits-Anhänger 5 t offen (o)	trailer (2 axle) Standard Model E5, civilian type, open, (5 ton)
(2 Achsig) Anhänger E8 Einheits-Anhänger 8 t offen (o)	trailer (2 axle) Standard Model E8, civilian type, open, (8 ton)
(2 Achsig) Anhänger mit Anlage zum Nachfüllen des Sauerstoffbedarf von Kampfflugzeuge	trailer (2 axle) for filling Oxygen into fighter planes
(2 Achsig) Anhänger (Langholz) für 6 Auffahrtsschienen Brückengerät I.Z.	trailer (2 axle) for 6 ramps of Type I.Z. bridge (long pole equipment)
(2 Achsig) Anhänger mit mittlerer Betriebsstoffkesselanlage (o) der Luftwaffe	trailer (2 axle) with medium boiler tank for aviation fuel
(2 Achsig) Anhänger mit schwerer Betriebsstoffkesselanlage (o) der Luftwaffe	trailer (2 axle) with heavy boiler tank for aviation fuel
(2 Achsig) Anhänger mit Feldballonwinde 40 der Artillerie	trailer (2 axle) with winch for observation ballon Model 40 of the artillery
(2 Achsig) Anhänger mit Flakkommandogerät Hazemeyer der Marine	trailer (2 axle) with antiaircraft fire direction computer Model Hazemeyer
(2 Achsig) Anhänger mit 2cm-Flak auf Sockellafette	trailer (2 axle) for 2 cm antiaircraft gun Model 30 on pedestal base
(2 Achsig) Anhänger mit Kessel für Flüssigsauerstoff für Fernraketen	trailer (2 axle) with tank for Liquid Oxygen for V2 rocket units
(2 Achsig) Anhänger mit Kurbelmast 30m der Nachrichtentruppen	trailer (2 axle) with extendable antenna (30 meters) for the Signal Troops
(2 Achsig) Anhänger 1,5 t für Raupenschlepper Ost	trailer (2 axle) for Raupenschlepper Ost (1.5 ton)
(2 Achsig) Anhänger für Schleppboot 200 PS der Pioniere	trailer (2 axle) for towing boat (200 HP) of the Engineers
(2 Achsig) Anhänger schwimmfähig für Land-Wasser-Schlepper (Kassbohrer)	trailer (2 axle) for the amphibious truck ("LWS")(made by Kassbohrer)
(2 Achsig) Entgiftungsgeräte-Anhänger für den EntgiftungsgerätekW. (Kfz. 305/12)	trailer (2 axle) for the decontamination equipment truck (Kfz. 305/12)
(2 Achsig) Kabeltrommel-Anhänger für FR-Einheiten	trailer (2 axle) for cable drums for V2 rocket units
(2 Achsig) Kfz. Werkstatt-Anhänger für FR-Einheiten	trailer (2 axle) with motor maintenance shop for V2 rocket units
(2 Achsig) Landebahn-Leuchtanhänger	trailer (2 axle) for runway lighting
(2 Achsig) Luftverdichter-Anhänger für FR-Einheiten	trailer (2 axle) for air compressor for V2 rockets
(2 Achsig) Omnibus-Anhänger (Kassebohrer Type P4 1939)	trailer (2 axle) for motor bus (bus Model P4 1939)(made by Kassebohrer)
(2 Achsig) Rohrwagen 40 für 12,8cm Flak 40	trailer (2 axle) for 12,8cm antiaircraft gun barrel
(2 Achsig) Sägevollgater auf Anhänger	trailer (2 axle) for mobile buzzsaw
(2 Achsig) Scheinwerfer-Transportwagen für Scheinwerfer G150 (alter Art)	trailer (2 axle) for 150cm searchlight Model G150 (old type)
(2 Achsig) Scheinwerfer-Transportwagen für Scheinwerfer G110	trailer (2 axle) for 110cm searchlight Model G110
(2 Achsig) Strabo-Kran 16t als Anhänger	trailer (2 axle) for 16 ton collapsible crane (made by Strabo)
(2 Achsig) Tragflächen-Transportanhänger a & b (Bauart 39)	trailer (2 axle) for transport of aircraft wings Type a and b, Model 39
(2 Achsig) V2 Transport-Anhänger Vidal	trailer (2 axle) for transporting a V2 rocket (made by Vidal)
(2 Achsig) Wasserstoffverdichter-Anhänger 41+42	trailer (2 axle) for Hydrogen compression Model 41+42
(2 Achsig) Wasserstoffentwickler-Anhänger 40+41	trailer (2 axle) for Hydrogen developing Model 40+41
(3 Achsig) Anhänger 8 t für 800 PS Motorboot 43	trailer (3 axle) (8 ton) for motor boat Model 53 (800 HP)
(3 Achsig) Anhänger offen (o) mit Nutzlast 11.000 kg	trailer (3 axle) cargo, civilian type, open (11 ton)
(3 Achsig) Anhänger mit 30-t Kran	trailer (3 axle) for 30-ton collapsible crane
(3 Achsig) Anhänger schwimmfähig mit Nutzlast von 10 t	trailer (3 axle) amphibious (10 ton)
(3 Achsig) Anhänger schwimmfähig mit Nutzlast von 20 t	trailer (3 axle) amphibious (20 ton)
(3 Achsig) Anhänger für die Fernrakete A4 (V2) Fabrikat Meiller	trailer (3 axle) for transporting a V2 rocket (made by Meiller)
(4 Achsig) Anhänger für schwere Lasten Culemeyer	trailer (4 axle) for heavy cargo (made by Culemeyer)
(6 Achsig) Anhänger für schwere Lasten Culemeyer bis 60 t	trailer (6 axle) for heavy cargo (60 ton) (made by Culemeyer)
(6 Achsig) Anhänger für schwere Lasten Gothaer Waggonfabrik bis 60 t	trailer (6 axle) for heavy cargo (60 ton) (made by Gothaer Waggonfabrik)
(Mehrachsig) Anhänger für schwere Lasten bis 110 t	trailer (multi-axle) for heavy cargo (110 ton)
(Mehrachsig) Anhänger für schwere Lasten bis 150 t	trailer (multi-axle) for heavy cargo (150 ton)
(Mehrachsig) Anhänger mit geschlossenem Aufbau für Zinkdruckrotationspresse	trailers (multi-axle) with enclosed body for zincograph rotating printing press

GERMAN ARMY RANKS AND *STELLENGRUPPEN* (BILLET GROUPS)

This is only a simplified account of the German military personnel structure and hierarchy. Readers are warned that, as in all armies, they were in actual fact more complicated, with important differentiations being made between designations of rank, billet, function, and skill.

‘Billet’ indicates an appointment to (staffing of) a position – also called a ‘slot’ – like Squad Leader, Platoon Commander, Divisional Commander, Executive Officer, Supply Sergeant, etc. Confusingly, in some cases, the billet has the same designation as a rank, such as Hauptfeldwebel.

The equivalent Ranks given in English are neither completely World War II British nor American, and is not going to satisfy any specialist. (However a specialist would probably not be reading this anyway). Nearly all German officer ranks correspond to US Army ranks, although their terminology differs, a *Generalmajor* being the equivalent of a brigadier general. Modern US Army rank equivalents have some differences. There is one more enlisted rank (Command Sergeant Major), and one more Warrant Officer rank (Warrant Officer 3rd Class). US Army Warrant Officers are counted as officers, not enlisted men. In the German WWII Army, all ranks below 2nd Lieutenant were enlisted men.

The German Army divided officers billets into eight groups, depending on the function to be carried out. German wartime officer ranks were permanent, which often made it impossible for German officers to be promoted to the higher rank which their wartime billet would actually have warranted. For example, although a Captain normally staffed the billet of Company Commander, this was not always a rule. If there were not enough Captains then a senior member of a lower rank was assigned to that billet. Conversely, if there were too many of a higher rank than one or more might be assigned a lower ranking billet. Many Divisions were commanded by a Brigadier General - and even an occasional Colonel - instead of a Major General. Conversely, if a billet was particularly critical, a higher-ranking person might be assigned to that billet than would normally be the case. Skill was preferred to rank. Promotion was achieved by serving time. The function or billet filled as such was not a ground for promotion.

The enlisted men were divided into three billet groups: Senior Sergeants (Unteroffiziere mit Portepee) (“O” Group), Junior Sergeants (Unteroffiziere ohne Portepee) (“G” Group), and Other Ranks (Mannschaften) (“M” Group).

Enlisted members of the German Army had an ‘Occupation’ (Laufbahn), i.e. a career or field of specialty, like Infantry, Supply, Finance and so on. The occupation might be incorporated into the rank designation, such as *Beschlagschmiedobergefreiter*, a farrier (horseshoe smith) corporal; or even be used instead of the rank designations, such as *Beschlagmeister*, (‘Farrier Master’), who was an expert farrier sergeant.

The highest combat leader position held by an enlisted man was that of platoon leader. However, this usually applied only to the third and fourth platoons. All other combat command positions were held by officers. Sergeants and Warrant Officers were in charge of logistics and administration, freeing the officers for their primary function of leading men into combat. It was not unusual for senior enlisted men to become involved in combat when the need arose, although the German Army considered it a waste of skilled manpower to use these highly trained and experienced men for this purpose.

German Tables of Organization (KStN – *Kriegsstärkenachweisungen*) had many notes indicating which billets and specialist slots were to be filled with what ranks and specialists, listing which billets had priority over others, which could alternatively be filled by a person with specialized knowledge or skill, and which billets should by preference be filled with regular army personnel.

Although it was expected to have rank and billet corresponding to each other, this was far from the case. Specialist personnel was rare and many units were raised in a hurry, not having enough time to acquire all its correct personnel. And once a unit entered combat, the chances of acquiring the exact, highly-skilled soldier for the correct position often became merely a matter of luck.

The German Wehrmacht also had a unique category of personnel within its ranks, namely the *Wehrmachtbeamten*, which can be loosely translated as Armed Forces Civil Servants or as Government Service Officials. They were found in administrative, legal, and technical service positions. They were civilians performing functions within the Armed Forces. Although they were not classified as soldiers, they wore uniforms identical with those of the Service branch they were serving with, albeit with different insignia. Their duties, at least at field and company level, could lead to armed encounters with enemy forces, and they were all armed with pistols.

Generals

Billet Group “A”

Commander-in-Chief / General Officer in an “A” Group	
<i>Oberbefehlshaber / General in A-Stelle</i>	
Generalfeldmarschall	General of the Army (Field Marshal)
Generaloberst	General

Billet Group “K”

Battery, Squadron, or Company Commander / Officer in a “K” Group	
<i>Batterie-, Schwadron- bzw. Kompanieführer / Offizier in K-Stelle</i>	
Hauptmann	Captain
Rittmeister	Captain (Cavalry Corps)
Stabsarzt	Captain (Medical Corps)
Stabsveterinär	Captain (Veterinary Corps)
Stabsmusikmeister	Captain (Band)
Stabs-	Captain (...)

Billet Group “Z”

Platoon Leader / Officer in a “Z” Group	
<i>Zugführer / Offizier in Z-Stelle</i>	
Oberleutnant	First Lieutenant
Oberarzt	First Lieutenant (Medical Corps)
Obermusikmeister	First Lieutenant (Band)
Oberzahlmeister	First Lieutenant (Paymaster Corps)
Ober-	First Lieutenant (...)
Leutnant	Second Lieutenant
Assistenzarzt	Second Lieutenant (Medical Corps)
Musikmeister	Second Lieutenant (Band)
Assistenzzahlmeister	Second Lieutenant (Paymaster Corps)
Assistenz-	Second Lieutenant (...)

Enlisted Men

Billet Group “O”

Senior Non-Commissioned Officer in an “O” Group	
<i>Oberfeldwebel (Unteroffiziere mit Portepee)</i>	
Stabsfeldwebel	Warrant Officer First Class
Obermeister	Warrant Officer 1st Class of a Technical Establishment
Hauptfeldwebel	Warrant Officer 2nd Class
Hauptwachtmeister	Warrant Officer 2nd Class (Cavalry, Artillery, AA, etc.)
Oberfeldwebel	Sergeant Major
Oberwachtmeister	Sergeant Major (Cavalry, Artillery, AA, etc.)
Musikleiter	Sergeant Major (Band)
etc.	etc.
Feldwebel	First Sergeant
Wachtmeister	First Sergeant (Cavalry, Artillery, AA, etc.)
Beschlagmeister	Farrier First Sergeant
Feuerwerker	Ordnance First Sergeant
Brieftaubenmeister	Pigeon Postmaster
etc.	etc.

Billet Group “G”

Non-Commissioned Officer in a “G” Group	
<i>Gruppenführer (Unteroffiziere ohne Portepee)</i>	
Unterfeldwebel	Staff Sergeant
Unterwachtmeister	Staff Sergeant (Cavalry, Artillery, AA, etc.)
etc.	etc.
Unteroffizier	Sergeant
Santitätsunteroffizier	Sergeant (Medical Corps)
etc.	etc.
Obergefreiter	Corporal
Santitätsobergefreiter	Corporal (Medical Corps)
etc.	etc.

Billet Group “M”

Other Rank in an “M” Group	
<i>Mannschaft</i>	
Gefreiter	Private First Class
Oberschütze	Private 2
Oberreiter	Trooper First Class
etc.	etc.
Schütze	Private 1 (infantryman)
Grenadier	Private (alternate designation for infantryman)
Jäger	Private (Mountain or Light Infantry)
Pionier	Engineer / Pioneer (Engineers)
Fahrer	Driver (usually of a horse-drawn vehicle)
Kraftfahrer	Driver (motor vehicle)
Beschlagschmiedschütze	Farrier (horse smith)
Spielman	Bandsman / Bugler
etc.	etc.

GERMAN MILITARY PERSONNEL JOB DESCRIPTIONS

Abteilungsarzt	Battalion Physician	Melder	Messenger / Runner
Abteilungskommandeur	Battalion Commander	Meldereiter	Messenger (horse-mounted)
